Visit the Workshop Assistant to get setup!

Hi I am Workshop Assistant!
I am here to help you during today's Copilot Studio workshop!
I can help you with labs, tell you where to download the lab materials and provide you with your unique environment URL's! You can find me at:
https://tinyurl.com/3v7pdcy9
or use the QR code below!

Introducing the Power Platform Community Conference App

STAY IN THE KNOW

- Get access to live event updates & notifications
- Build a personalized agenda
- Connect with other attendees
- Network with Sponsor & Exhibitors
- Join meet-ups
- Access event documents

Event Invitation Code:
5thAnnual2026

Workshop Agenda

Start Time	End Time	Topic
9:00 AM	9:30 AM	Welcome and Setup
9:30 AM	9:50 AM	Introduction to Copilot Studio
9:50 AM	10:00 AM	Knowledge
10:00 AM	**10:10 AM**	**COFFEE BREAK**
10:10 AM	10:25 AM	Knowledge
10:25 AM	10:50 AM	Tools
10:50 AM	11:15 AM	MCP Server
11:15 AM	11:55 AM	Topics and Prompt Tools
11:55 AM	**12:55 PM**	**LUNCH BREAK**
12:55 PM	1:05 PM	Autonomous Agents
1:05 PM	1:30 PM	GitHub Harness
1:30 PM	1:45 PM	Build an agent using the GitHub Harness
1:45 PM	2:10 PM	MCP Server - GitHub Harness
2:10 PM	2:45 PM	Skills - Simple
2:45 PM	3:30 PM	Skills Advanced
3:30 PM	3:45 PM	Channels & Publishing
3:45 PM	4:00 PM	Closing / Questions

COPILOT · MICROSOFT 365 · POWER PLATFORM

Microsoft Copilot

ONE NAME, MULTIPLE MEANINGS

Chat, Cowork, and Agents — and when to reach for each

THE CURRENT REALITY

The confusion is understandable.

Microsoft AI has moved fast, and the word Copilot now shows up across many tools, surfaces, and job types.

SAME FAMILY NAME

Copilot can mean chat, app assistance, agents, Studio, or a delegated work experience.

DIFFERENT WORK PATTERNS

- Ask a question
- Work inside an app
- Delegate a task
- Build an agent

UNDERSTANDING COPILOT

Why it feels messy

The confusion usually comes from mixing product names with work patterns.

Same word

Many Copilot experiences

Many surfaces

Chat, apps, Teams, browser

Fast changes

Features and labels evolve

Different permissions

Access varies by tenant

Mixed promises

Drafting, doing, building

UNDERSTANDING COPILOT

Ask, assist, delegate, build

Microsoft AI is easier to hold as three simple zones.

WHAT YOU USE

Copilot Chat & Apps

Copilot Chat and Copilot in your apps. Everyday help, in the moment.

WHAT YOU DELEGATE

Microsoft Cowork

Hand off meaningful work with context, standards, and review.

WHAT YOU BUILD

Copilot Agents

Agent Builder and Copilot Studio. Reusable agents, built deliberately.

UNDERSTANDING COPILOT

Ask, assist, delegate, build

Microsoft AI is easier to hold as three simple zones.

WHAT YOU USE

Copilot Chat & Apps

Copilot Chat and Copilot in your apps. Everyday help, in the moment.

FOCUS

WHAT YOU DELEGATE

Microsoft Cowork

Hand off meaningful work with context, standards, and review.

WHAT YOU BUILD

Copilot Agents

Agent Builder and Copilot Studio. Reusable agents, built deliberately.

COPILOT CHAT & APPS

THE EVERYDAY SURFACE

The front door to Microsoft AI.

This is where most people meet Copilot: a chat box that answers questions, drafts content, and summarizes what you already have. It is help in the moment, one exchange at a time.

ONE EXCHANGE AT A TIME

You ask, it answers. You read it, keep what works, and ask again. You stay in the driver's seat for every step.

WHAT IT DOES WELL

- Answer and explain
- Draft and rewrite
- Summarize and compare
- Find your own content

COPILOT CHAT & APPS

Where you meet Copilot

One assistant with many front doors. The conversation follows you between them.

Copilot app

Web, desktop, mobile

Teams

In chats and meetings

Outlook

Beside mail and calendar

Office apps

Word, Excel, PowerPoint

Edge and Windows

Next to what's on screen

COPILOT CHAT & APPS

Web answers vs. work answers

The biggest difference between Copilot experiences is simply what it is allowed to see.

WEB

Public knowledge

General answers, research, and drafting from public web content. Your files stay out of it unless you attach them.

WORK

Your organization's content

Answers built from the emails, meetings, chats, and files you already have permission to open.

COPILOT CHAT & APPS

Beyond the chat box

Chat is where you start. These are where the work stops disappearing.

Copilot Pages

Turns a good answer into an editable, shareable canvas you build on.

Copilot Notebooks

Scopes Copilot to a set of files you chose, so answers stay in bounds.

Copilot Search

Finds across your content and connected systems, then hands off to chat.

COPILOT CHAT & APPS

When a question needs real work

Two reasoning agents come built in, for the questions a single answer cannot settle.

RESEARCHER

Multi-step research

Works across the web and your work content to produce a structured, source-cited report.

ANALYST

Reasoning over data

Works a dataset the way an analyst would, and shows the steps it took to get there.

UNDERSTANDING COPILOT

Ask, assist, delegate, build

Microsoft AI is easier to hold as three simple zones.

WHAT YOU USE

Copilot Chat & Apps

Copilot Chat and Copilot in your apps. Everyday help, in the moment.

WHAT YOU DELEGATE

Microsoft Cowork

Hand off meaningful work with context, standards, and review.

FOCUS

WHAT YOU BUILD

Copilot Agents

Agent Builder and Copilot Studio. Reusable agents, built deliberately.

UNDERSTANDING COWORK

Chat helps. Cowork works.

The difference is not the quality of the answer. It is how much of the job it carries.

CHAT

Always-on help

Single-step, seconds to minutes. You direct each move and assemble the result yourself.

COWORK

Agentic work

Multi-step, minutes to hours. It plans, works across your apps, and checks in with you.

UNDERSTANDING COWORK

How a Cowork task runs

You describe the outcome. Cowork turns it into a plan you can watch and stop.

REQUEST

Describe the outcome

Say what you need, not every step

PLAN

It breaks the job down

Steps, sources, and what it will produce

WORK

It does the steps

Reads, drafts, builds, prepares

APPROVE

You decide

Nothing sensitive without a yes

UNDERSTANDING COWORK

What makes it repeatable

Cowork gets better when method, rhythm, and control move out of the prompt.

Skills

Saved method. How a recurring job should be done every time.

Automations

Saved rhythm. Work that runs on a schedule or on an event.

Approvals

Saved control. Sensitive steps stop and wait for a person.

UNDERSTANDING COPILOT

Ask, assist, delegate, build

Microsoft AI is easier to hold as three simple zones.

WHAT YOU USE

Copilot Chat & Apps

Copilot Chat and Copilot in your apps. Everyday help, in the moment.

WHAT YOU DELEGATE

Microsoft Cowork

Hand off meaningful work with context, standards, and review.

WHAT YOU BUILD

Copilot Agents

Agent Builder, Copilot Studio & SharePoint Agents. Reusable agents, built deliberately.

FOCUS

COPILOT AGENTS

THE BUILD LENS

A coworker you configure once.

An agent is Copilot narrowed to a single job: given a purpose, pointed at a specific set of sources, allowed to take specific actions, and shared with the people who need it.

WHY BUILD ONE

When the same question or the same job keeps coming back, stop re-explaining it. Configure it once and let everyone use it.

WHAT IS INSIDE ONE

- Instructions
- Knowledge sources
- Actions it can take
- Who it is shared with

COPILOT AGENTS

Multiple ways to build

Start on the lowest rung that solves the problem. Most people start too high.

DESCRIBE

Agent Builder

Minutes, in plain language, no code

POINT

SharePoint agent

An expert on a site or library

DESIGN

Copilot Studio

Logic, actions, other systems

COPILOT AGENTS

Agent Builder or Copilot Studio?

The dividing line is simple: does the agent need to reach outside Microsoft 365?

BUILDER

Knowledge in, answers out

Describe it in plain language, point it at content, share it. Best for scoped expertise.

STUDIO

Logic and connected systems

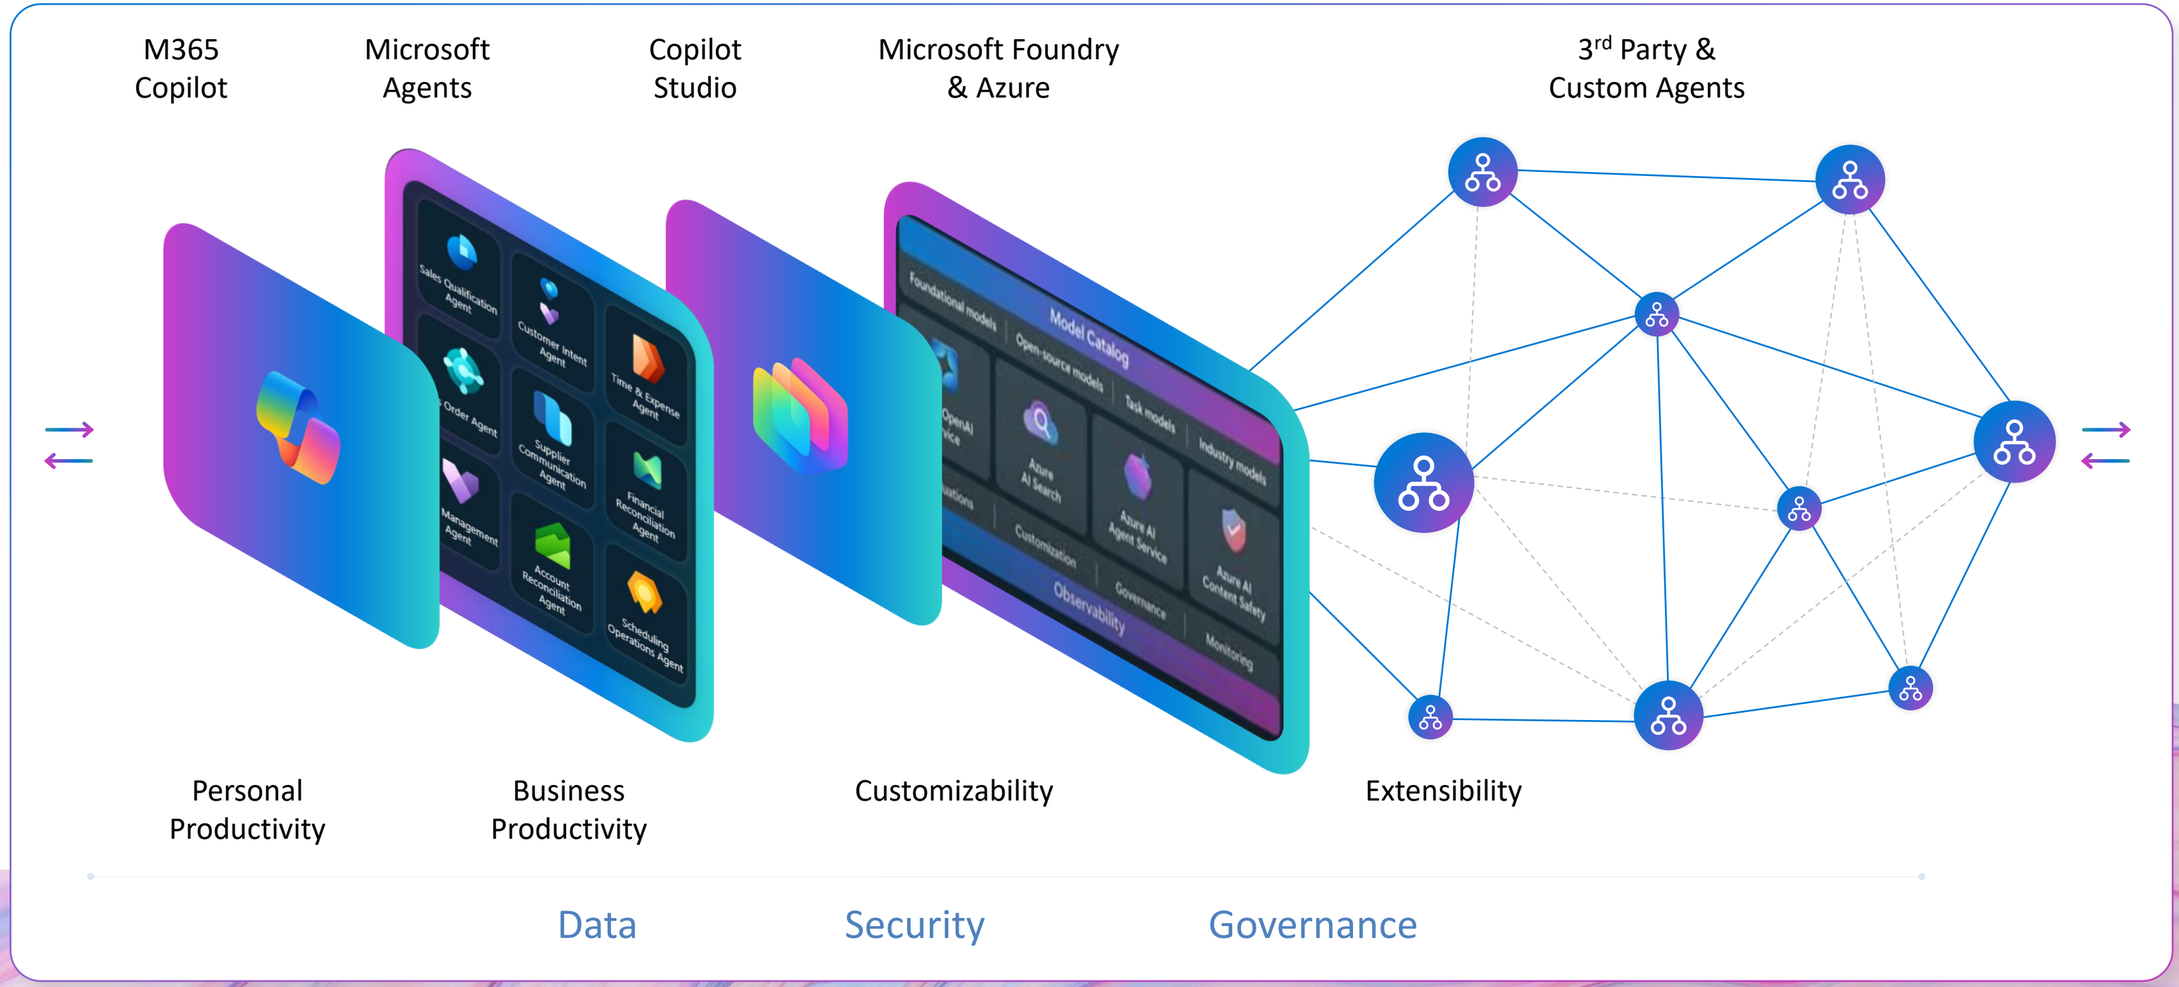

Low-code design for agents that call other systems, follow rules, and run on triggers.

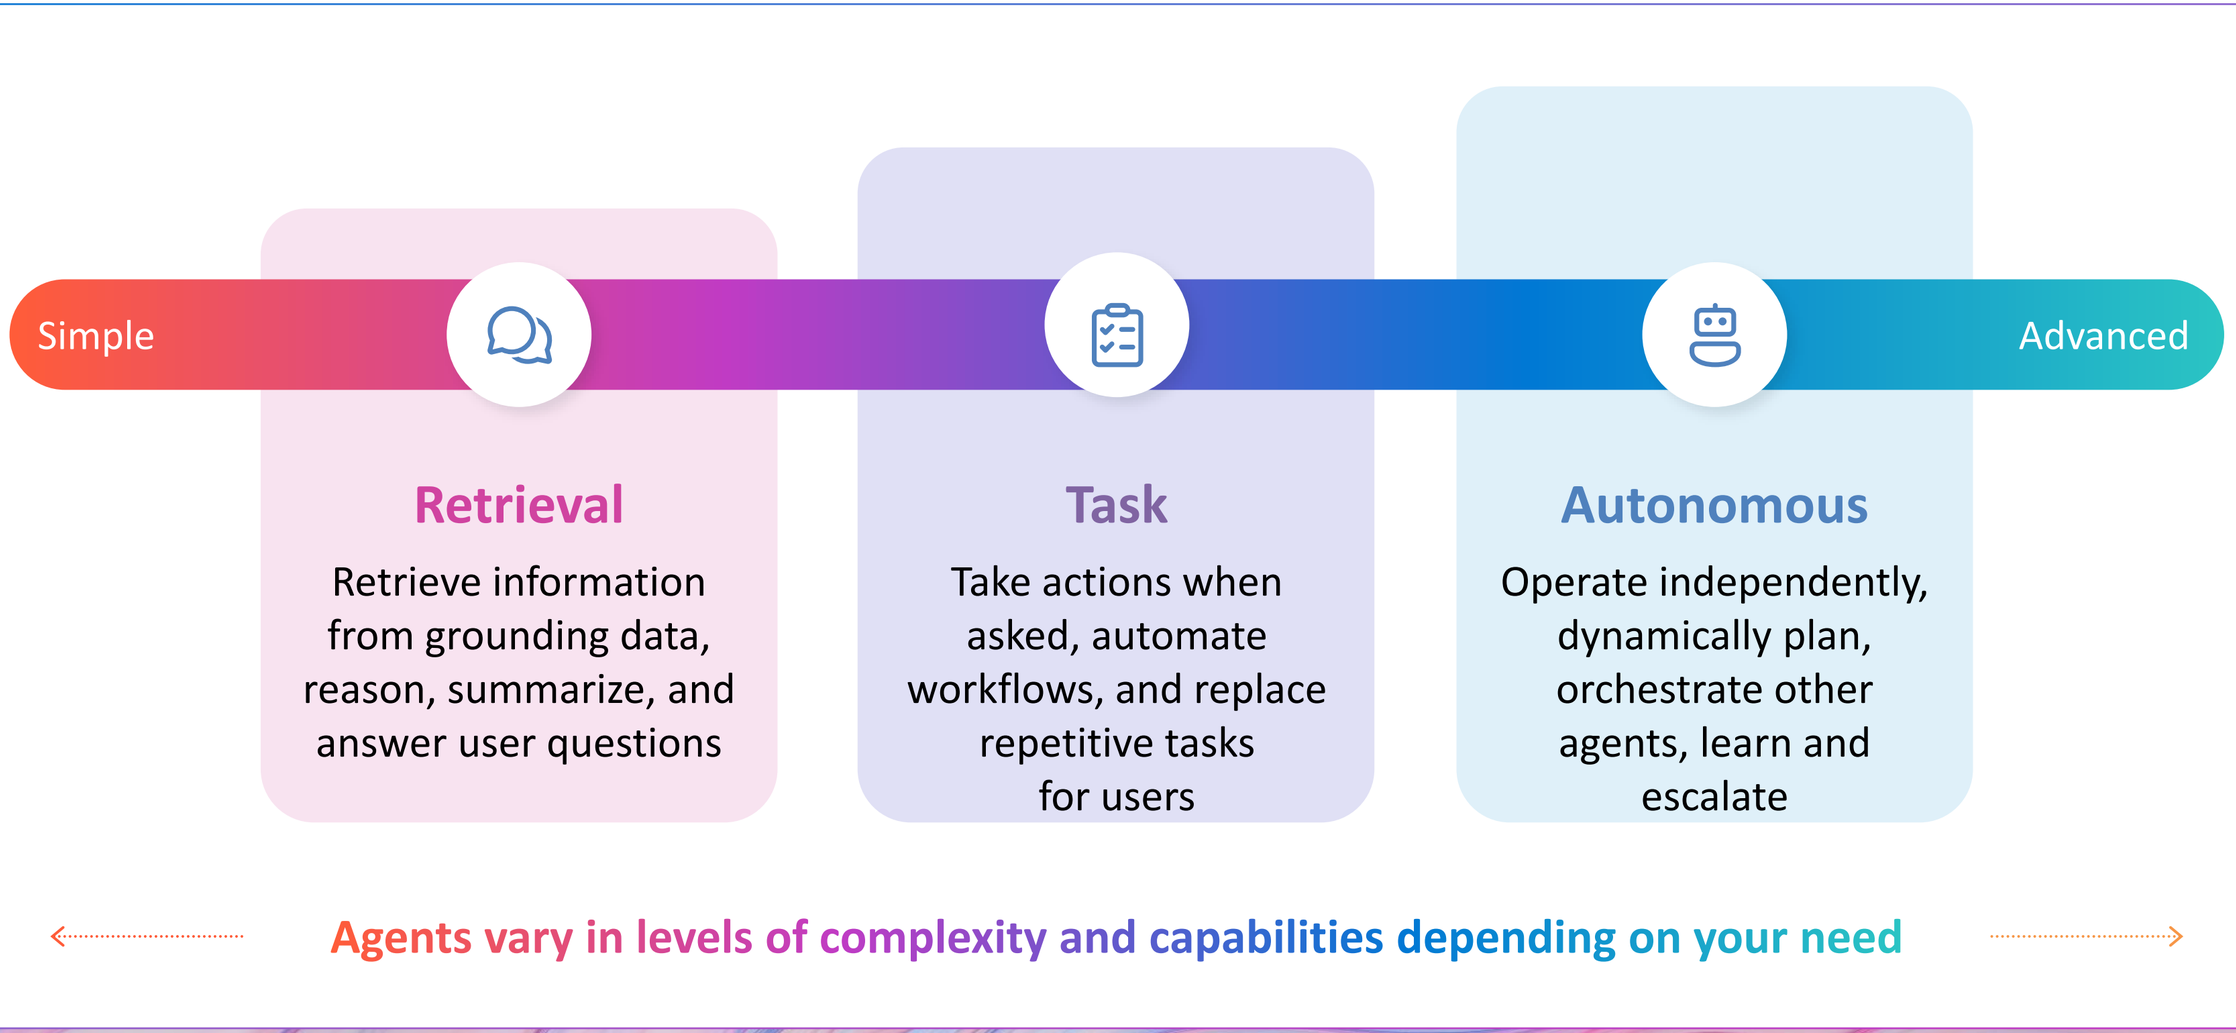

Introduction to Copilot Studio

Microsoft Agentic Ecosystem

Build and extend across your integrated Microsoft platform

Spectrum of agents

Core Concepts & Terminology

AGENTS

AI Model

- *The "brain" that reasons, understands language, intent, recognize patterns, generates responses and decides what it should do next.*
- *Many options to choose from*

Harness

- *Framework around the model Orchestrates execution; decides which tools to use and when*
- *Understands context*
- *Different harness, different capabilities*

Three harnesses, one Copilot Studio

Standard

Github

Copilot Chat

Why the harness matters

Github

- Most capable
- Built for reasoning-heavy agents
- Adjust when steps fail
- Creates files (word, excel, power point, pdf)
- Completing business processes
- Use Copilot Credits (during building/testing)

Standard

- Legacy Copilot Studio Agents
- Repeatable workflows/convo’s
- Rule based
- Structured

Copilot Chat

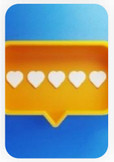

- Extending M365 Copilot Chat
- Used by internal teams only
- Consumption included in M365 Copilot license

Copilot Studio

One platform carries all three

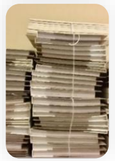

The harness decision comes before the build decision

The Component Model of Standard Harness

Topics

Custom authored experiences that allows the maker to be in full control of every aspect of the conversation

Knowledge

SaaS-based RAG pattern for search and summarization of content

Tools

Conversational wrappers over APIs through Power Platform Connectors aallowing Generative AI to provide abilities to collect API Inputs and Generate Outputs dynamically

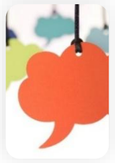

Variables

Ability to store conversation state and information into memory to be pragmatically accessed through the conversation and to adapt the conversation

Agents

Ability to group tools and knowledge together for consumption or to connect to external agents

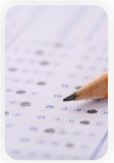

Channels

Ability to connect conversations to numerous interfaces such as Teams, Facebook Messenger, etc.

Analytics

E2E telemetry and reporting on conversations, audit, and application performance

Evaluations

Ability to test the quality of your agent and baseline performance against test sets

The Component Model of Github Harness

Instructions

- Everything that is **general**: role, scope, tone, safety rules
- Always-on guidance

Knowledge

- **Searchable/semantic** facts
- Docs, sites, files
- Ground responses

Tools

- Live lookups / APIs
- CRUD operations
- Actions on **external systems**

Memory

- Persistent context
- **Per-user preference** history

Agent Sandbox (Code Execution)

- Ad hoc analysis
- Run code / shell tools
- **Data manipulation**

Skills

Reusable procedures the loop can invoke when a task needs a specific workflow

SKILL.md

- Textual procedure or context useful **for a specific topic or task**
- Can influence future planning decisions
- Can suggest a flow (but not enforce it)

Skill supporting files

- Python or helper files, runs in a sandbox. Can use a set of libraries. No outbound.
- Complex local logic, or data processing
- Only if the orchestrator reads the skill

Connected agents

- Delegate specialized scope **only if needed**
- Own instructions / tools / skills / knowledge
- Useful for large sub-domains that require a different orchestration of skills and tools
- Except for large scenarios, splitting small tasks into connected agents DOESN'T INCREASE the accuracy

Channels

Evaluations

Analytics

Enterprise Governance

Design rule: choose the smallest component that makes the behavior reliable, inspectable, and safe inside the loop.

Github Harness

Agent Sandbox (Code Execution)

- Ad hoc analysis
- Run code / shell tools
- **Data manipulation**

Memory

- Persistent context
- **Per-user preference** history

SKILL.md

- Textual procedure or context useful **for a specific topic or task**
- Can influence future planning decisions
- Can suggest a flow (but not enforce it)

Standard Harness

Topics

- Custom authored experiences

Both

Analytics

Evaluations

Channels

Instructions

- Everything that is **general**: role, scope, tone, safety rules
- Always-on guidance

Tools

- Live lookups / APIs
- CRUD operations
- Actions on **external systems**

Knowledge

- **Searchable/semantic** facts
- Docs, sites, files
- Ground responses

Connected agents

- Delegate specialized scope **only if needed**
- Own instructions / tools / skills / knowledge
- Useful for large sub-domains that require a different orchestration of skills and tools
- Except for large scenarios, splitting small tasks into connected agents DOESN’T INCREASE the accuracy

Orchestration Patterns

Standard Harness: plan -> execute

1. INTENT
Understand the request

2. PLAN
Synthesize a multi-step workflow

3. EXECUTE
Run authored steps

Explicit plan object

- Collect inputs
- Execute action (connector, topic, query data, ...)
- Response: summarize

Less live replanning, easier to inspect

Standard

Copilot & GitHub Harness: continuous Thought -> Action -> Observation

THOUGHT
Reason over the latest state

ACTION
Call a tool or topic

latest state

DECIDE
Choose the next step live

OBSERVE
Read the tool result

Github

Best fit: broad problem spaces that cannot be fully mapped upfront, like querying a complex data model with many unknown fields.

Orchestration Standard Harness

CLASSIC

GENERATIVE

Standard

Classic Orchestration

User utterance

Topic selection

- Topic
- Topic
- Topic
- Topic

Topic matched

Topic

Topic is executed as authored by maker, including questions, messages and calls to external data / actions.

Response

No topic matched

Fallback - Search over knowledge
Search available knowledge sources and summarize an answer using generative AI if an answer is found.

Response

Fallback System Topic

'Sorry, I didn't understand that'

Standard

Generative Orchestration

User utterance

Agent Instructions

Plan generation

- Topic
- Topic
- Tool
- Tool
- Knowledge
- Knowledge

One or more actions / topics / knowledge matched

A plan is generated using tools / knowledge / topics

Fallback System Topic

'Sorry, I didn't understand that'

Standard

Topic

Tools

- Slot filling
- Execution
- Response

Knowledge

- Search
- Summarize
- Citations

Unified Response

A message is generated to answer a user's question using the outputs from all tools / knowledge / topics in the plan.

Github Harness | Self-Reflection & Critique

AGENT RE-READS ITS OWN WORK AND ASKS IF IT'S ACTUALLY RIGHT.

Draft Answer

↓

Critic Review

"Is this right?"

↓

Revise & Retry

↑ (dashed loop back to Draft Answer)

Github

Catch Errors Mid-Loop

Detect mistakes before they propagate into later steps

Independent Subagent Review

Spawn a fresh agent to audit the work with no prior bias

Reliable on Long Tasks

Without reflection, long trajectories drift off course

Github Harness | Termination Conditions

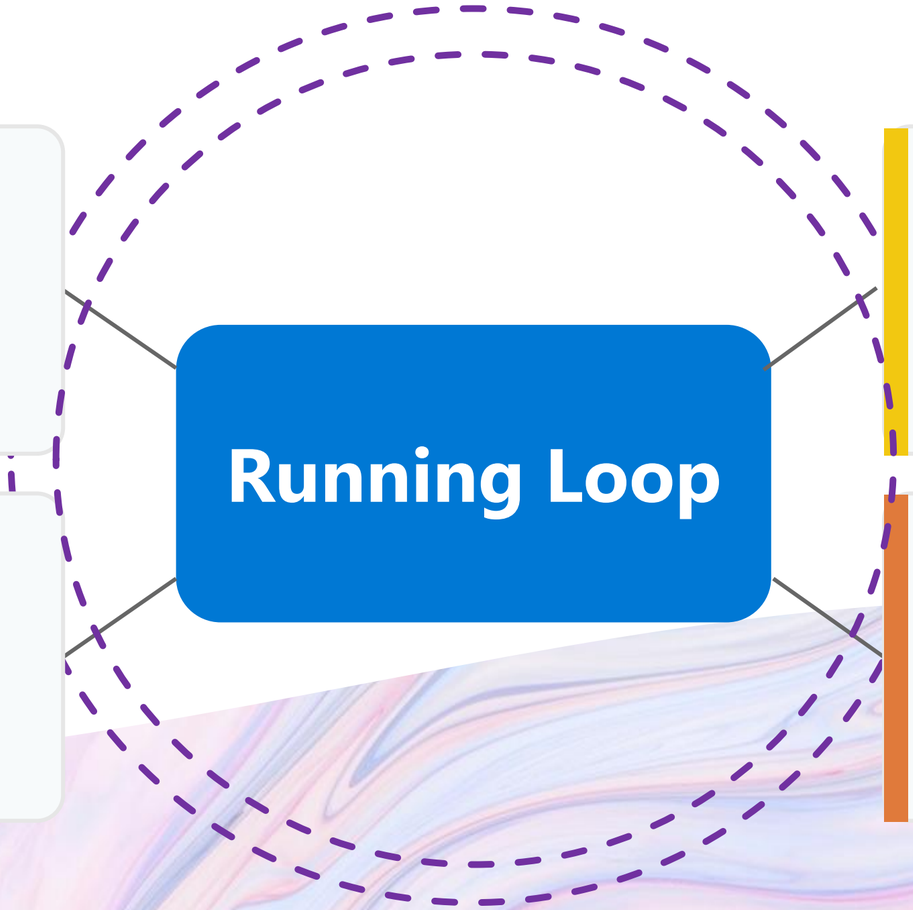

EVERY LOOP NEEDS AN EXIT. WITHOUT THEM, AN AGENT CAN HAPPILY RUN FOREVER.

Goal Reached

Success criteria met

Budget Exhausted

Step or token limit

User Interrupt

Human stops or revises

Unrecoverable Error

Tool fails, cannot retry

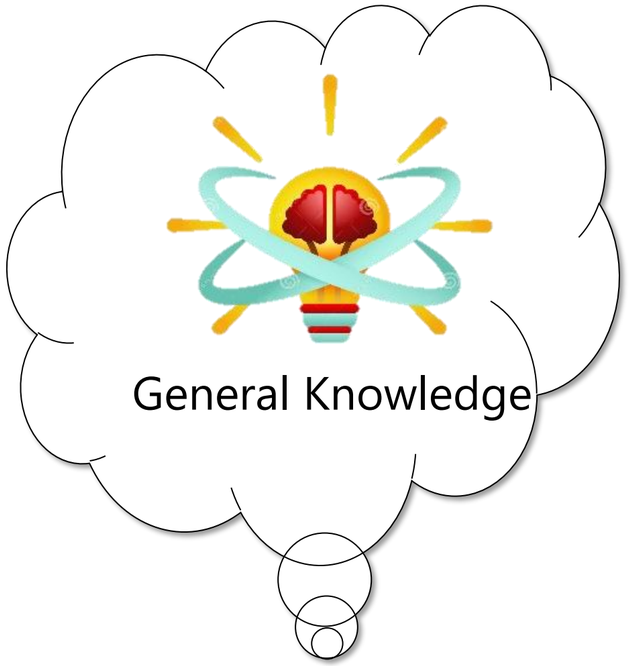

A good agent always checks: am I making progress? If not, stop.

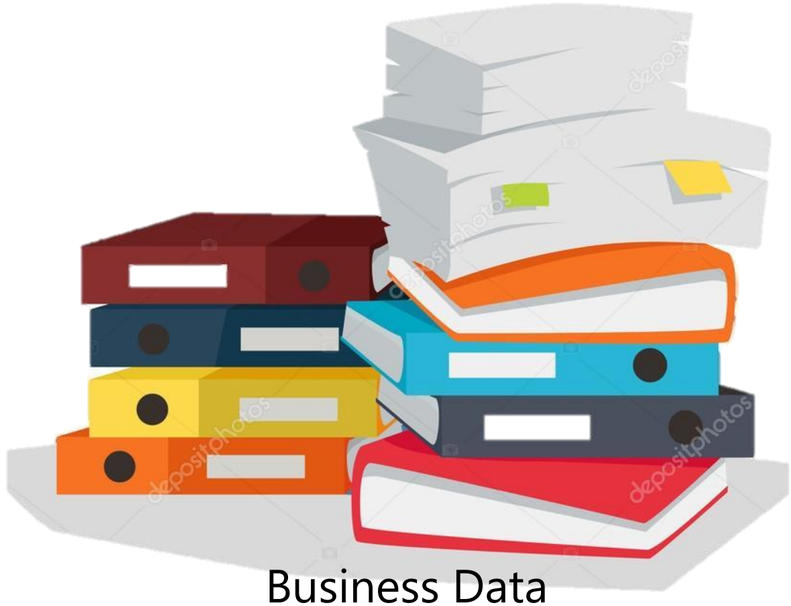

Github

Knowledge is Power

What is grounding?

+

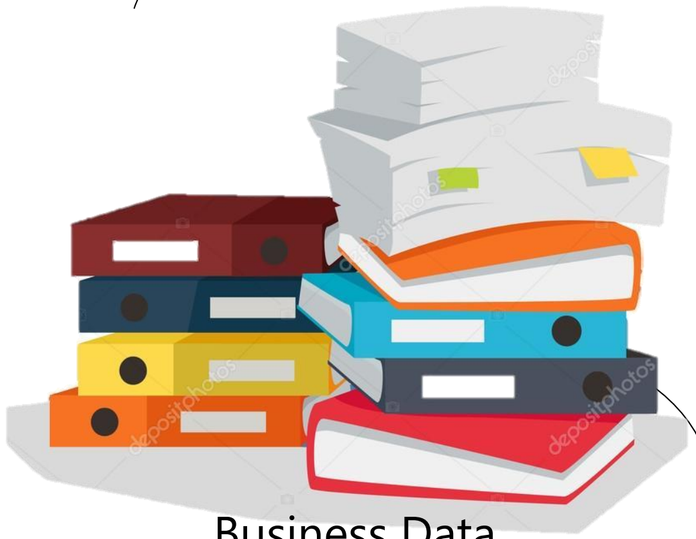

What is grounding?

Can be disabled in Standard Agents

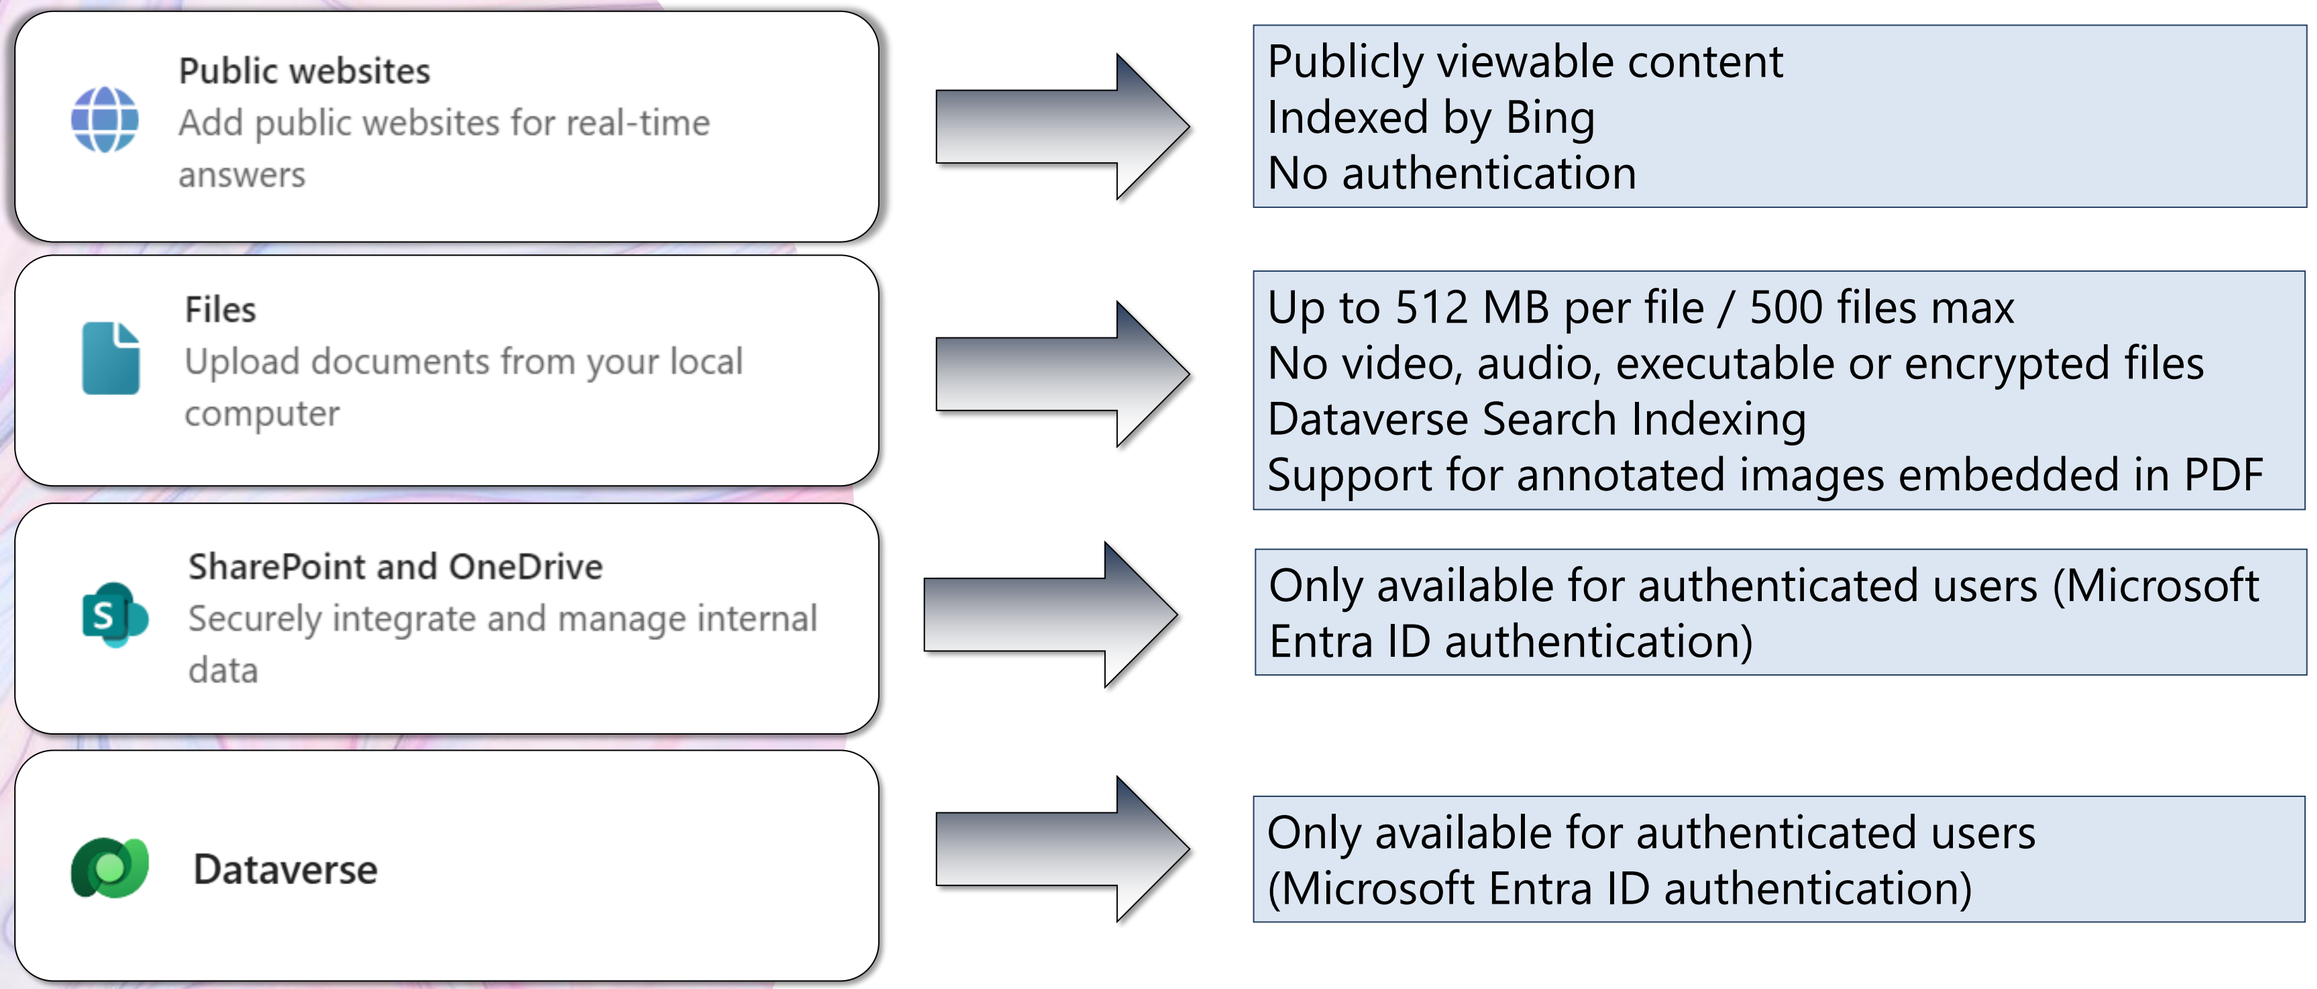

General Knowledge

Business Data

Knowledge Sources

More Knowledge Sources

- Dynamics 365
- Azure SQL
- Zendesk
- Salesforce
- Snowflake
- Confluence
- Azure AI Search
- SAP OData
- ADLS Gen2
  Microsoft Graph only
- ServiceNow
- Databricks
- Oracle Database

Agent Instructions

Instructions are used by the agent to:

- Decide which tools or knowledge need to be called
  Generate a response to the end - user
- Fill inputs for tools based on available context

Instruction Types

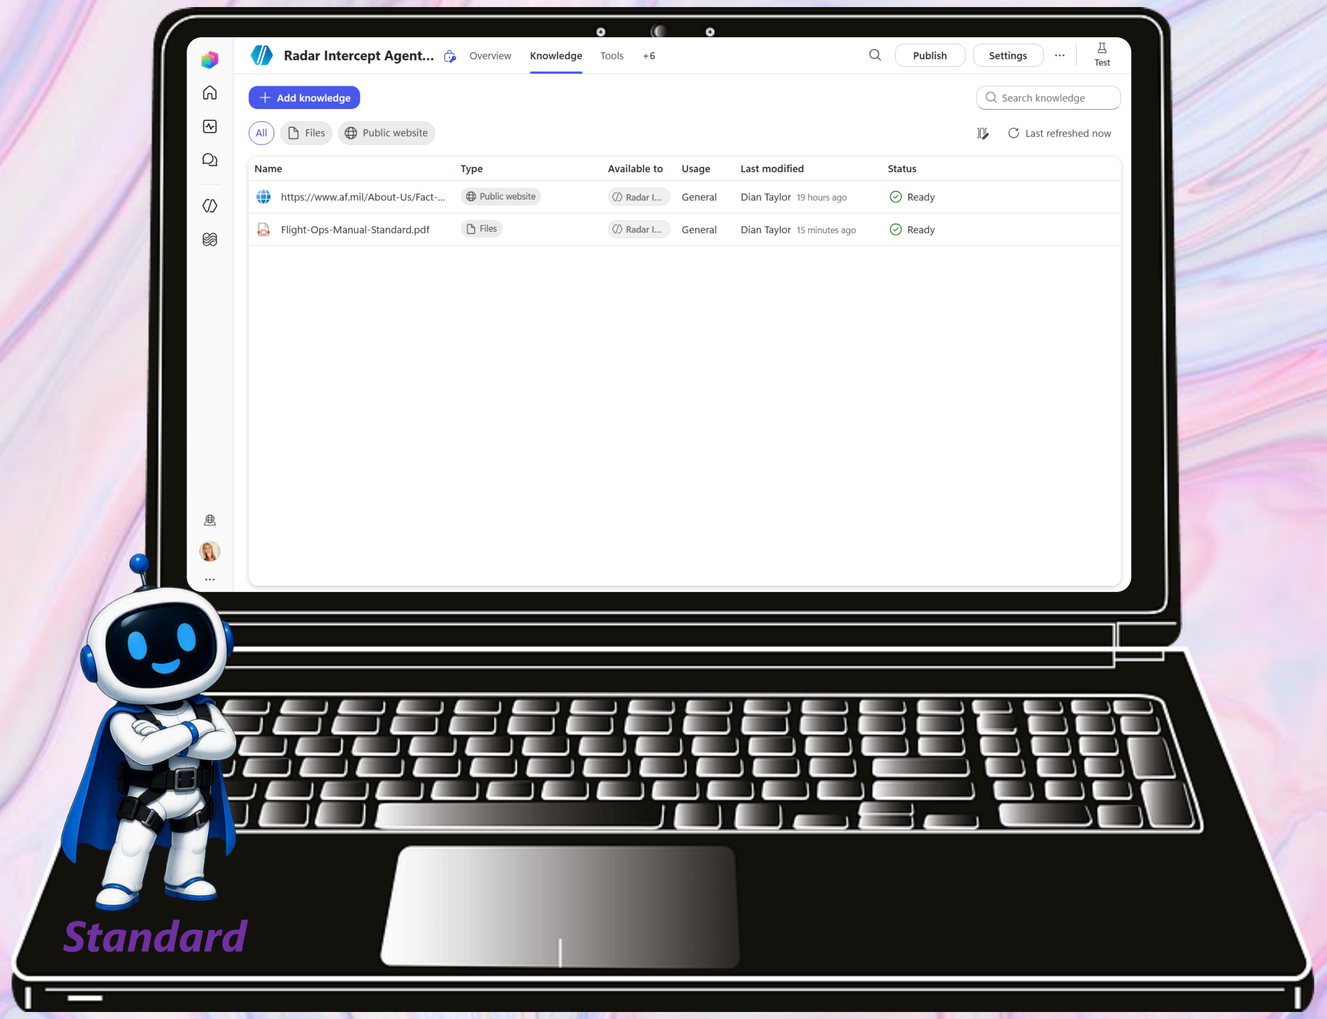

- **Constraints**: *e.g. Only respond to messages that are relevant to Contoso corporation and ordering coffee. Otherwise tell the user you can't help with their inquiry.*

- **Response Format:** e.g. *Respond to inquiries in tabular format. Answer in bold and underline fonts as necessary.*

- **Guidance:** *e.g. Search only within specific country folders relevant to the employee's country.*

Goal	Vocabulary
Conditions	when, if, ensure, compare
Filter	from, include, exclude, compare, identify
Data	provide, retrieve, get, use, analyze, extract
Tools	notify, direct, ask, assign

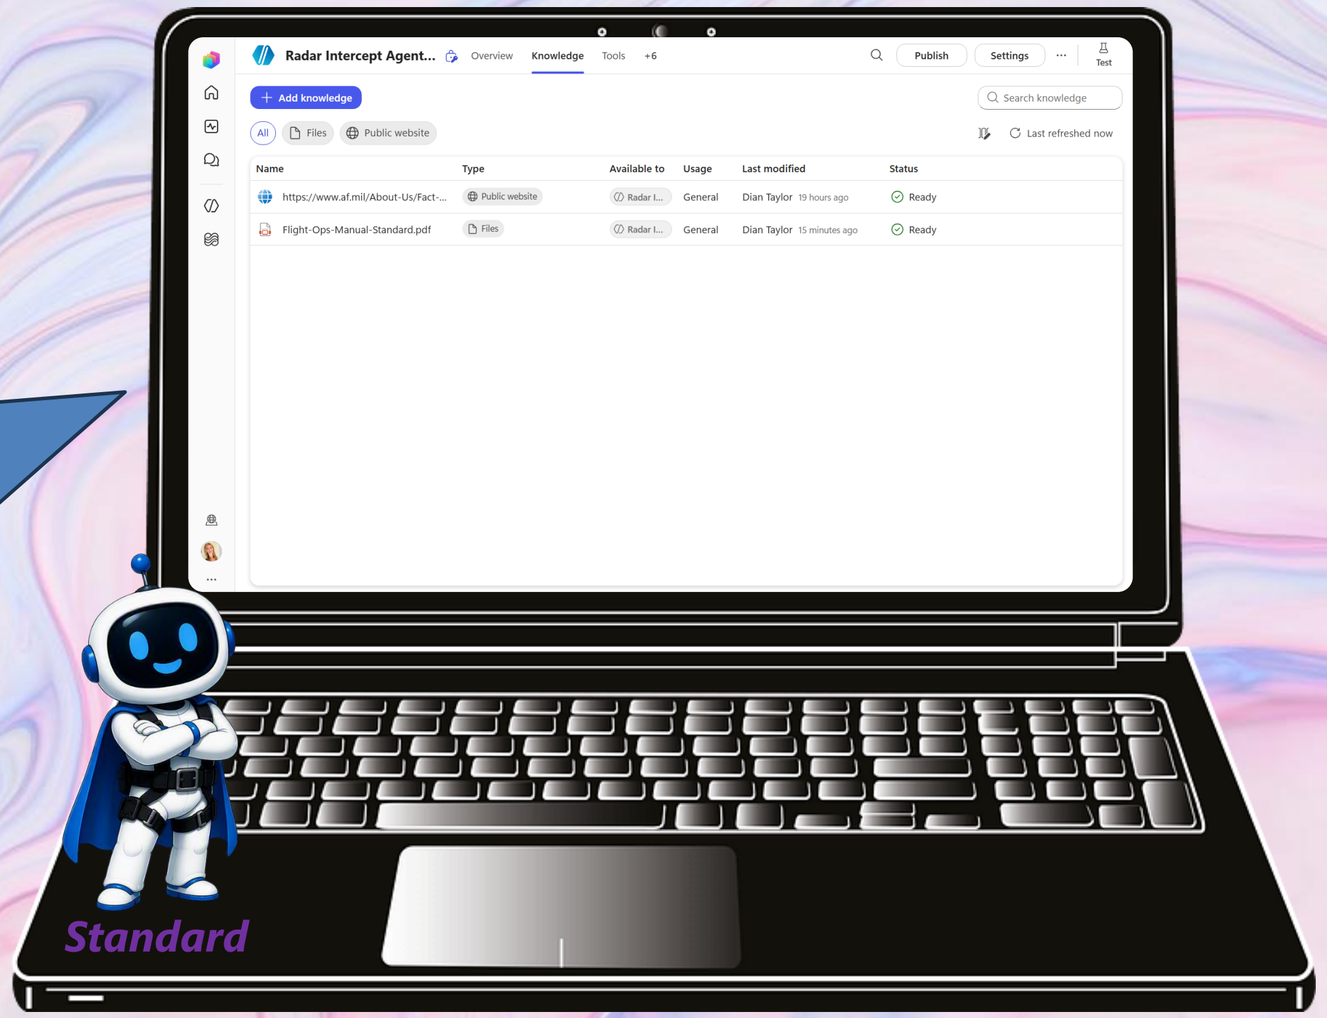

Demonstration 1: Show a standard agent with knowledge

Exercise 1: Build a standard agent with knowledge

Test Questions

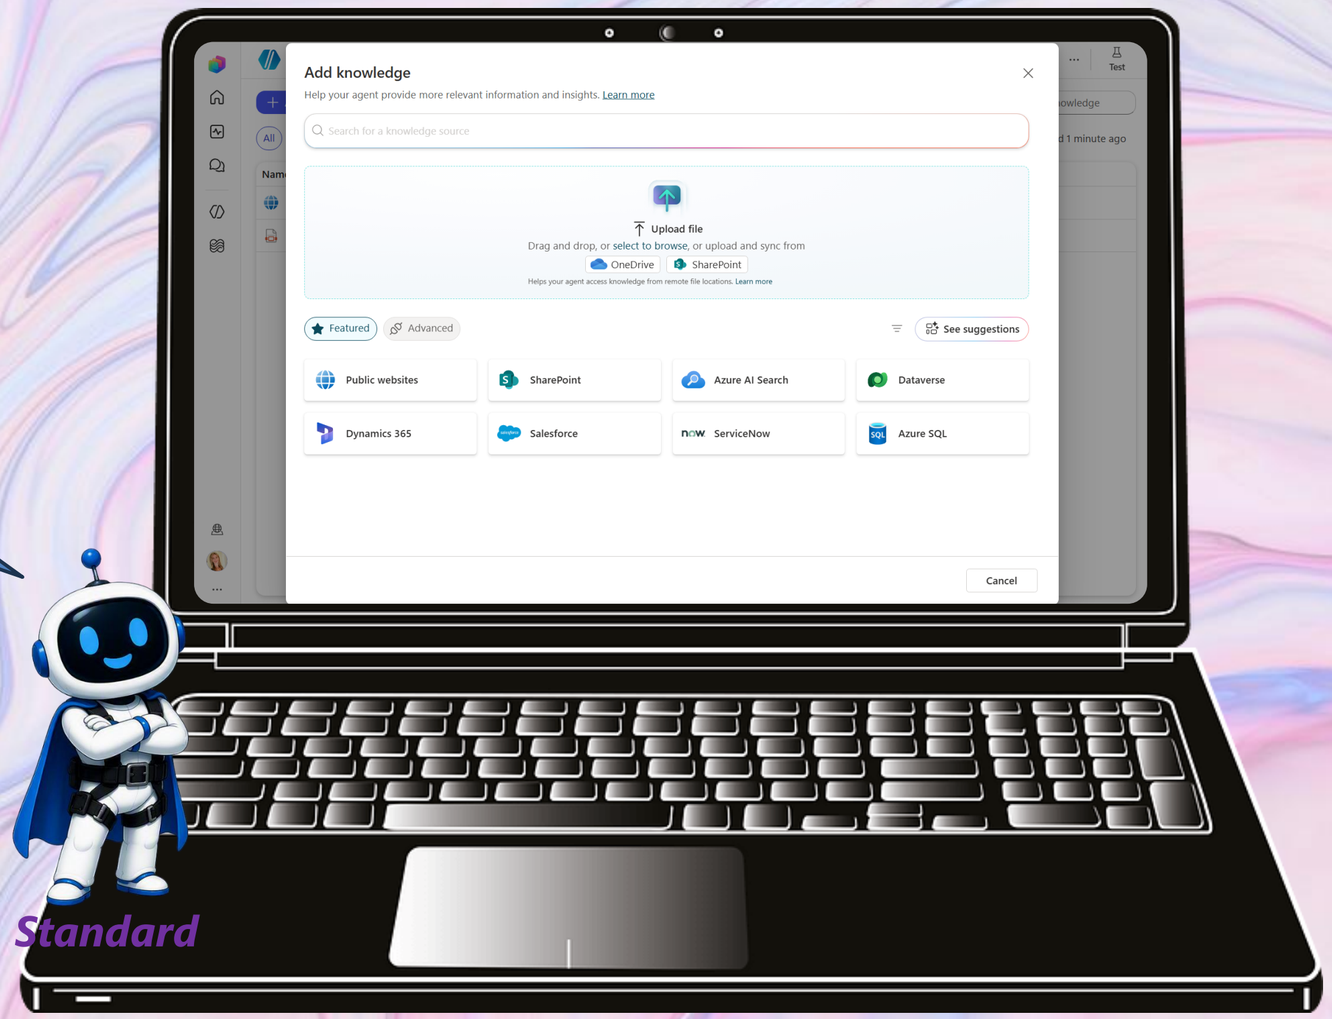

- Which aircrafts are for ground forces support?
- Pull the full fact sheet for F-16 Fighting Falcon
- Which aircraft is the fastest?
- Show me an image of the AIM-120 AMRAAM
- What are the call sign rules?

Exercise 2: Upload Document

Test Questions

- What are the callsign rules?
- Show me the mission sortie maximums in a table
- List the no-go conditions

Tools

What?

Predefined tasks that the agent can execute
I.E Getting information from external source
Updating rows
Creating rows

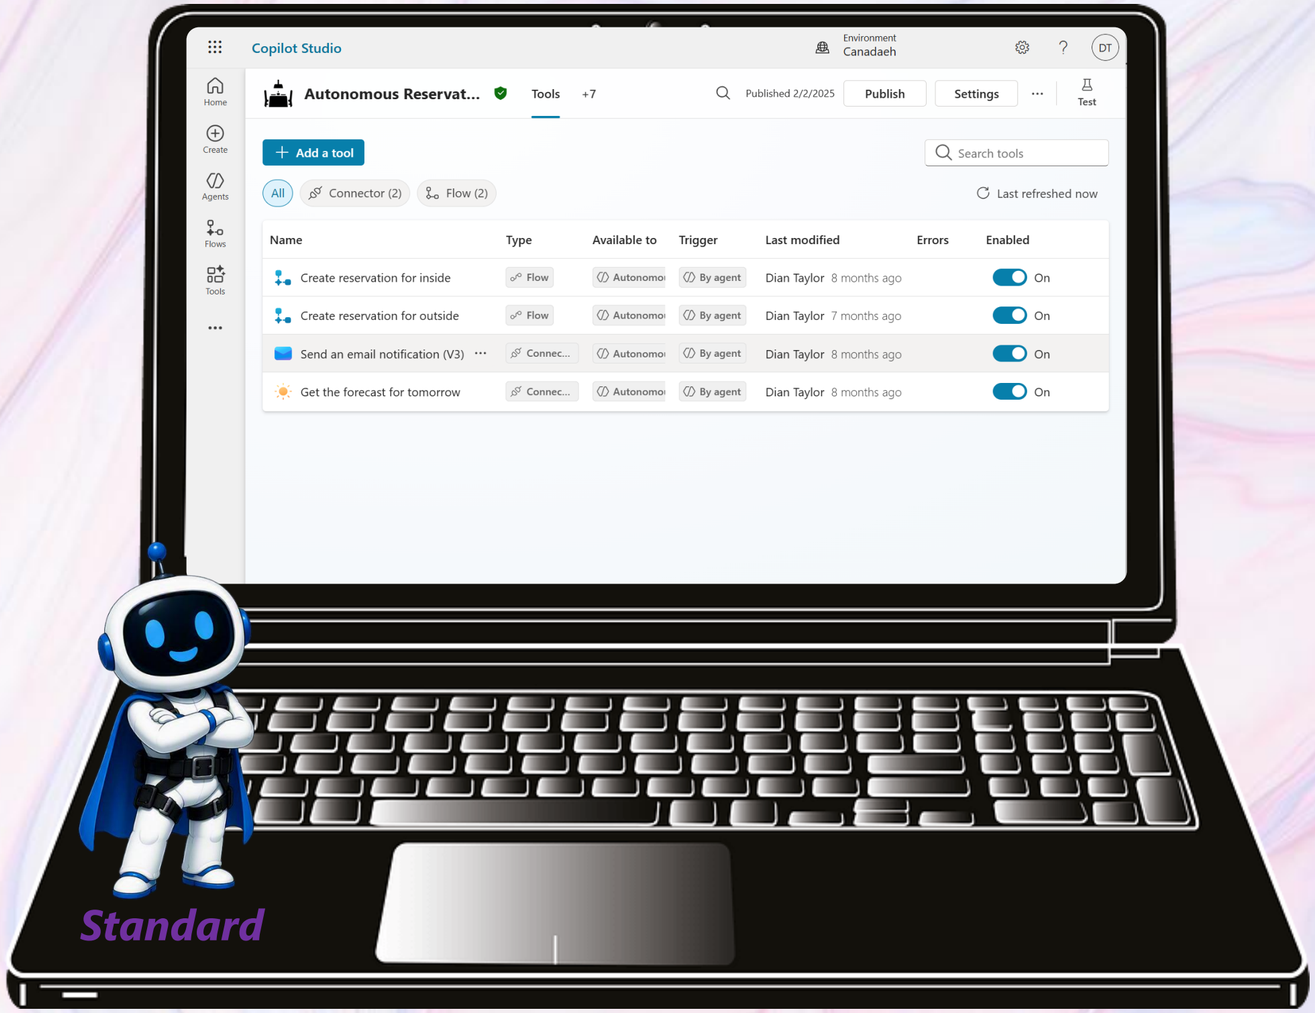

Why?

Enhance Agent Functionality
Saves time
Improve user experience
Integrate with other systems

Tools

Connectors	Use Power Platform Connectors to connect to external sources
Prompts	Specific instructions for a task
Agent & Power Automate Flows	Use Agent/Power Automate flows to perform actions (1200+ connectors) (not full parity)
Rest API	Connect to external systems to receive data or perform actions
MCP Servers	Preconfigured actions with access to one or multiple external systems

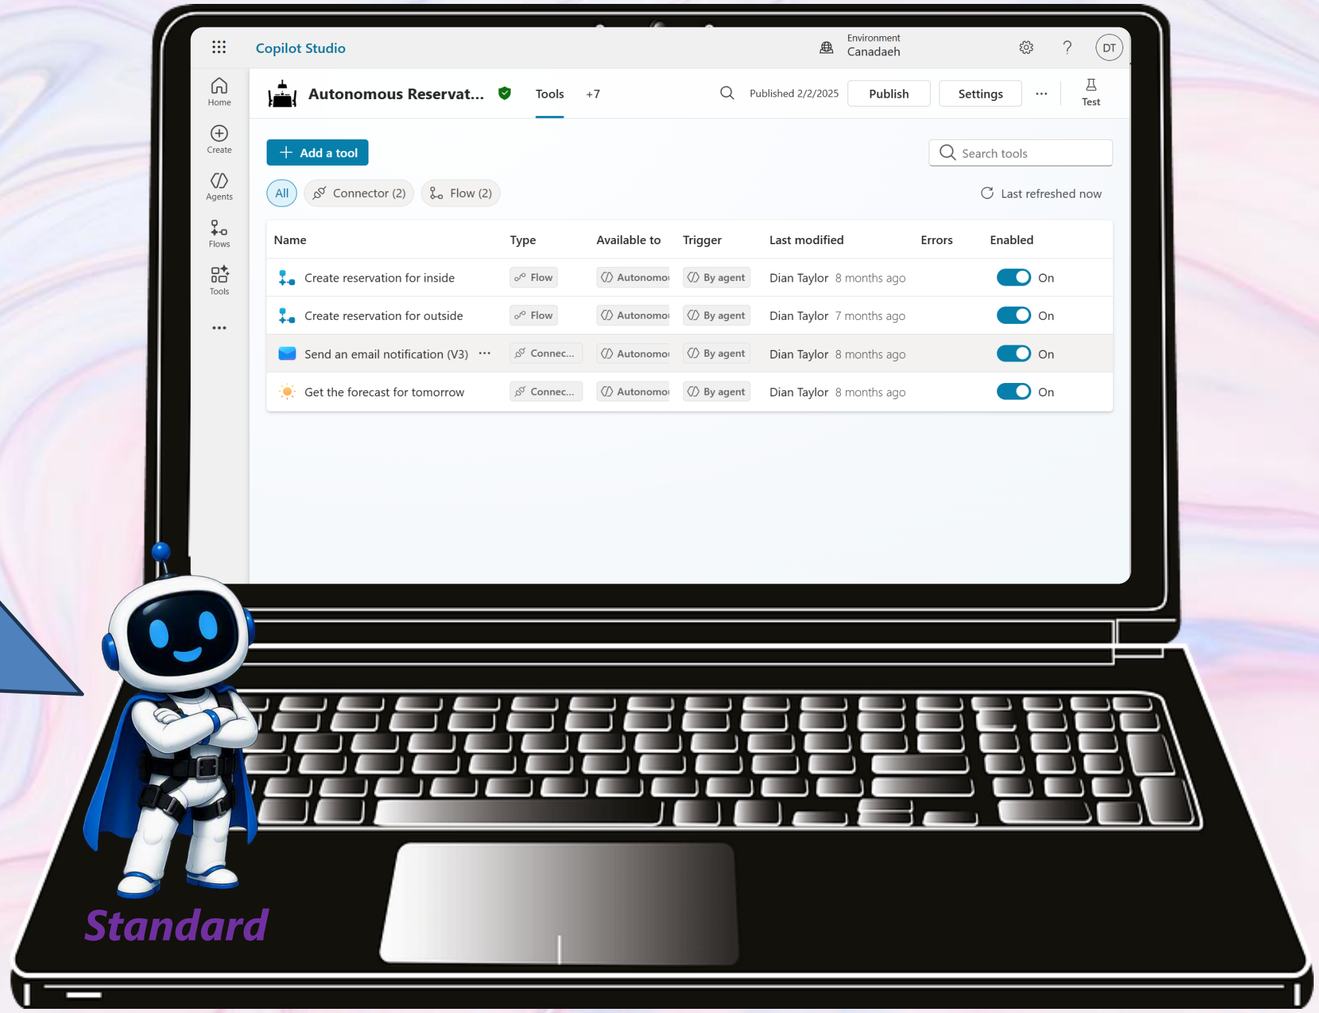

Demonstration 3 | Tools:
Power Automate Flow & Weather Connector

Exercise 3 | Tools: Add Power Automate Flow

Test Questions

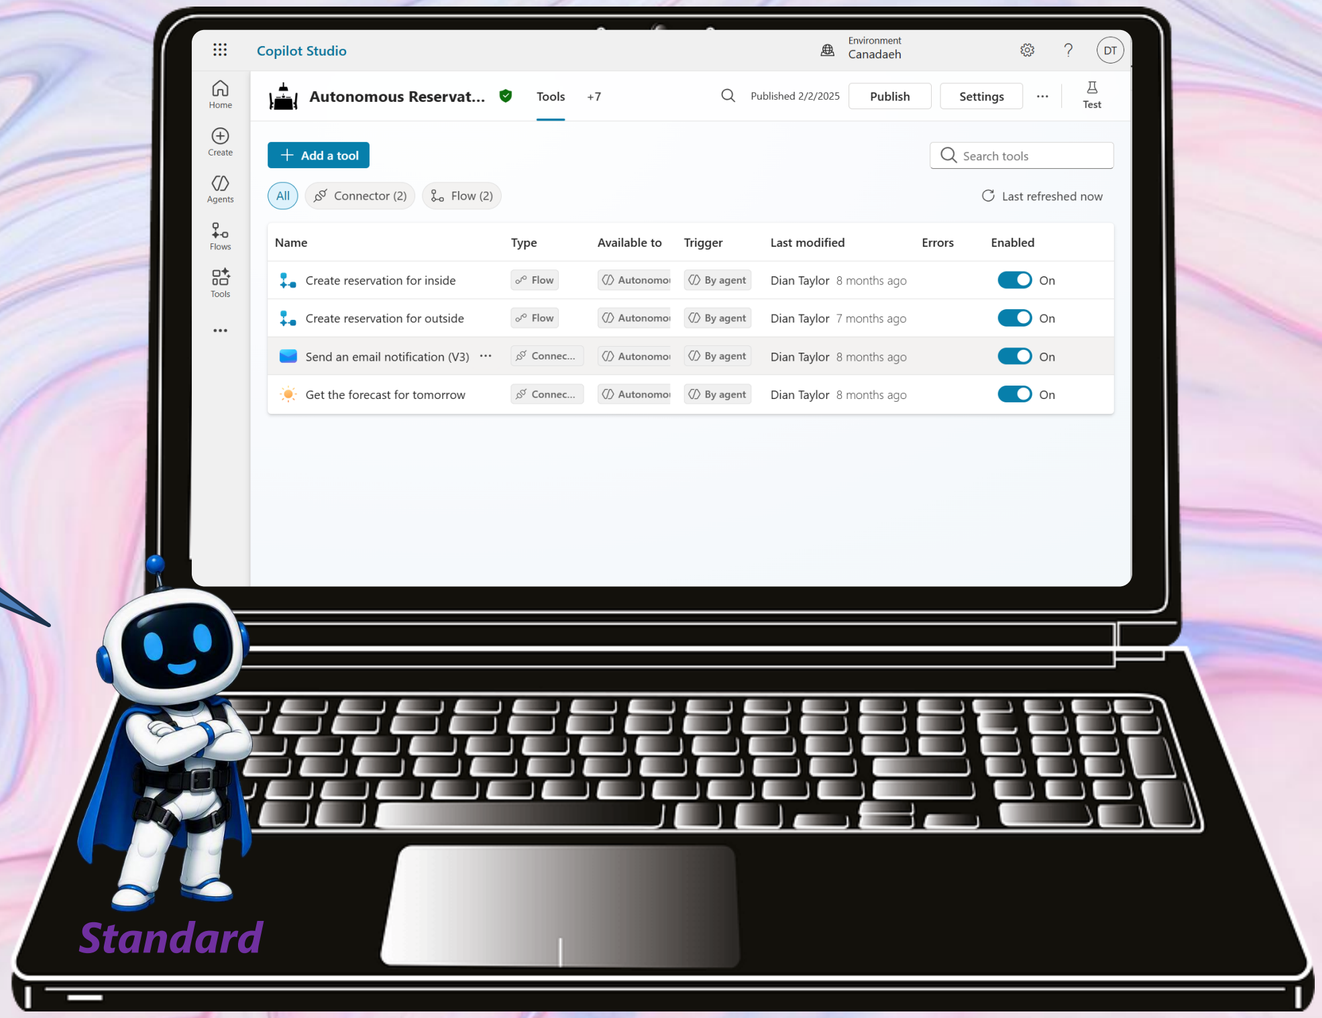

1. Enter '*I am looking for flight plan FLP-1000B6W5*' to start testing the action
2. Now enter: 'I *am also looking for flight plans FLP-1001D0F2 and FLP-1002P9D8*'
3. Now enter: *'Lastly I need flight plan1234546789*'
4. Now enter: '*Create a new flight plan for 10/26/2026 at 3PM Alaska Slope, Pilot: <your name>*'

Exercise 4 | Tools: Add Weather Forecast Connector

Test Questions

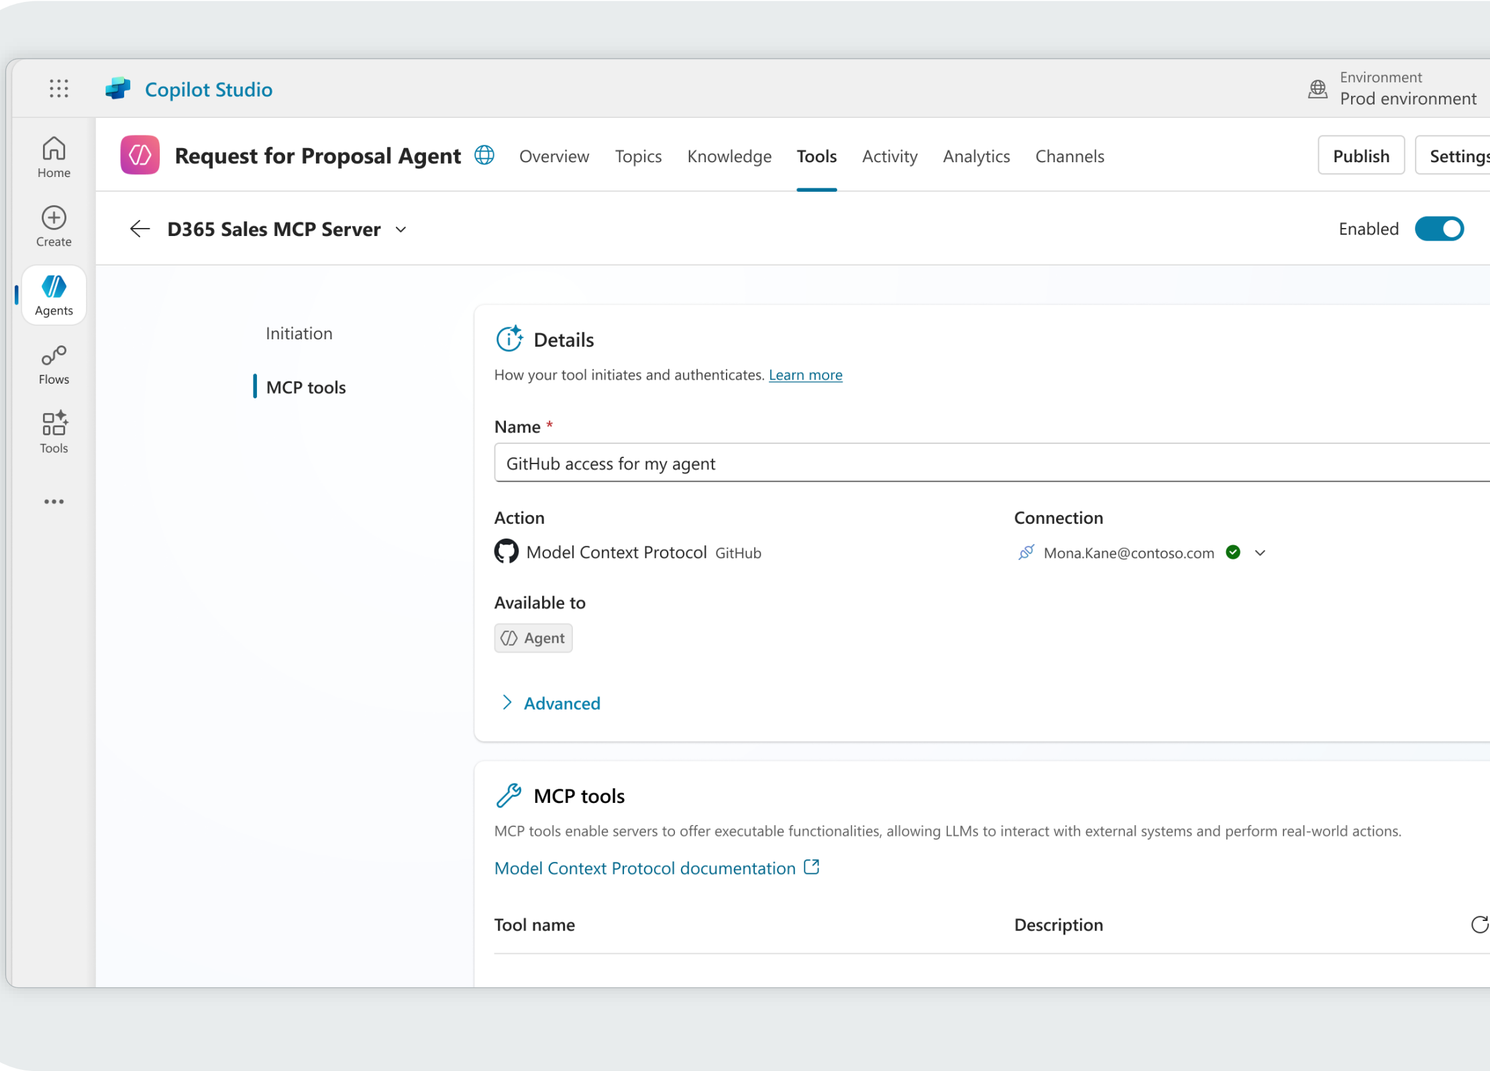

1. Enter: '*What is the weather like tomorrow in Miami, FL?'* to test the connector.

MCP Server

A universal interface that allows AI models to interact with external tools, data sources, etc.

andardized context for AI Models
Connect MCP to many systems
wo-way communication
tensible by design
overnance, monitoring, extensibility

MCP Server

Why?

- Add MCP Servers to Agents
- Agent discovers available MCP Tools (capabilities)
- No configuration **per action** but **per server**
- Lots of ‘ready to go’ MCP Servers available

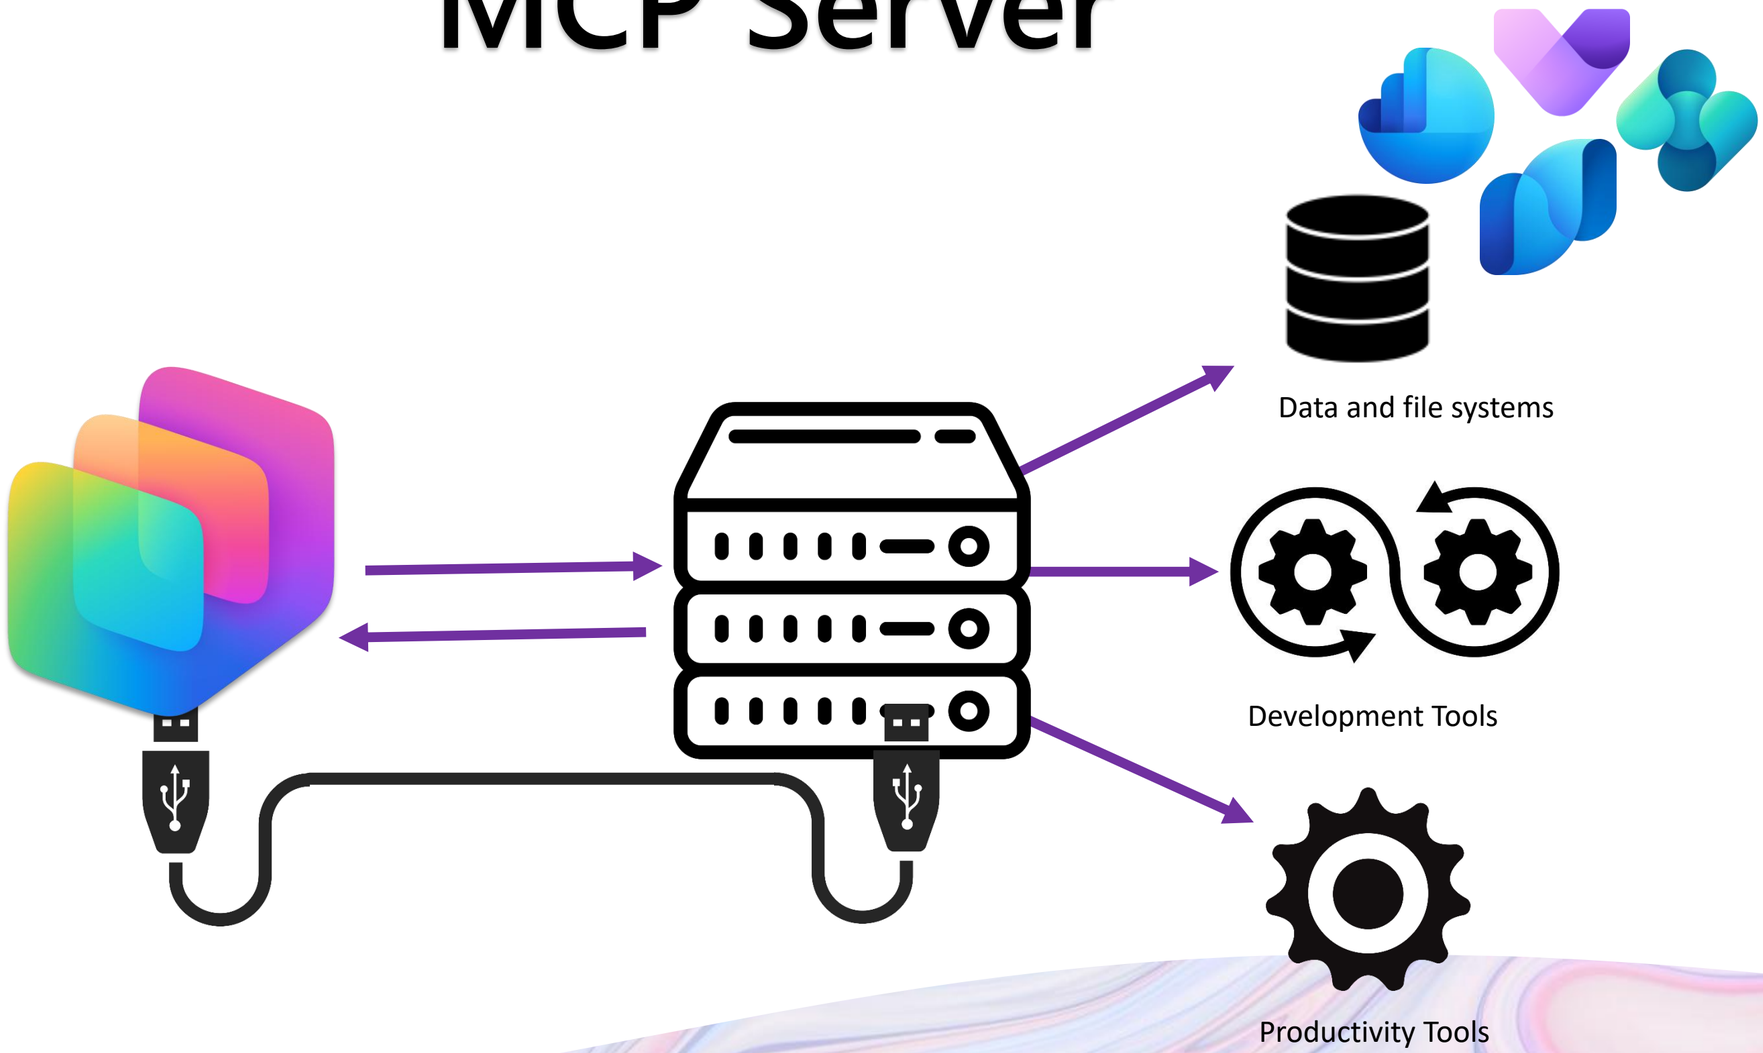

MCP Server

Why?

- MCP Server Exposes Tools to the Agent
- Agent reasons over the user request
- Agent decides when to invoke which tool(s)
- Tools return structured results
- Tools become part of Agent reasoning

MCP Server

Data and file systems
Development Tools
Productivity Tools

Demonstration 5: Tools | Add MCP Server

Exercise 5: Tools | Add MCP Server

Test Questions

- Ask: '*Please give me details on flight plan FLP-1002P9D8*'
- *Click 'Allow' in the 'Connect to continue' message that shows up in the chat*
- *Ask the agent to change the date of the flight plan,*
- *Ask the agent to create a new flight plan:*
  - *Fighter Jet: F-22 Raptor*
  - *Pilot Name: <Your Name>*
  - *Flight date and time: November 17 at 11AM*
  - *Est. Duration: 60 minutes*
  - *Mission Type: Combat Simulation*

Copilot Building Blocks

Knowledge	Topics	Tools	Instructions

Standard

Topics

Standard

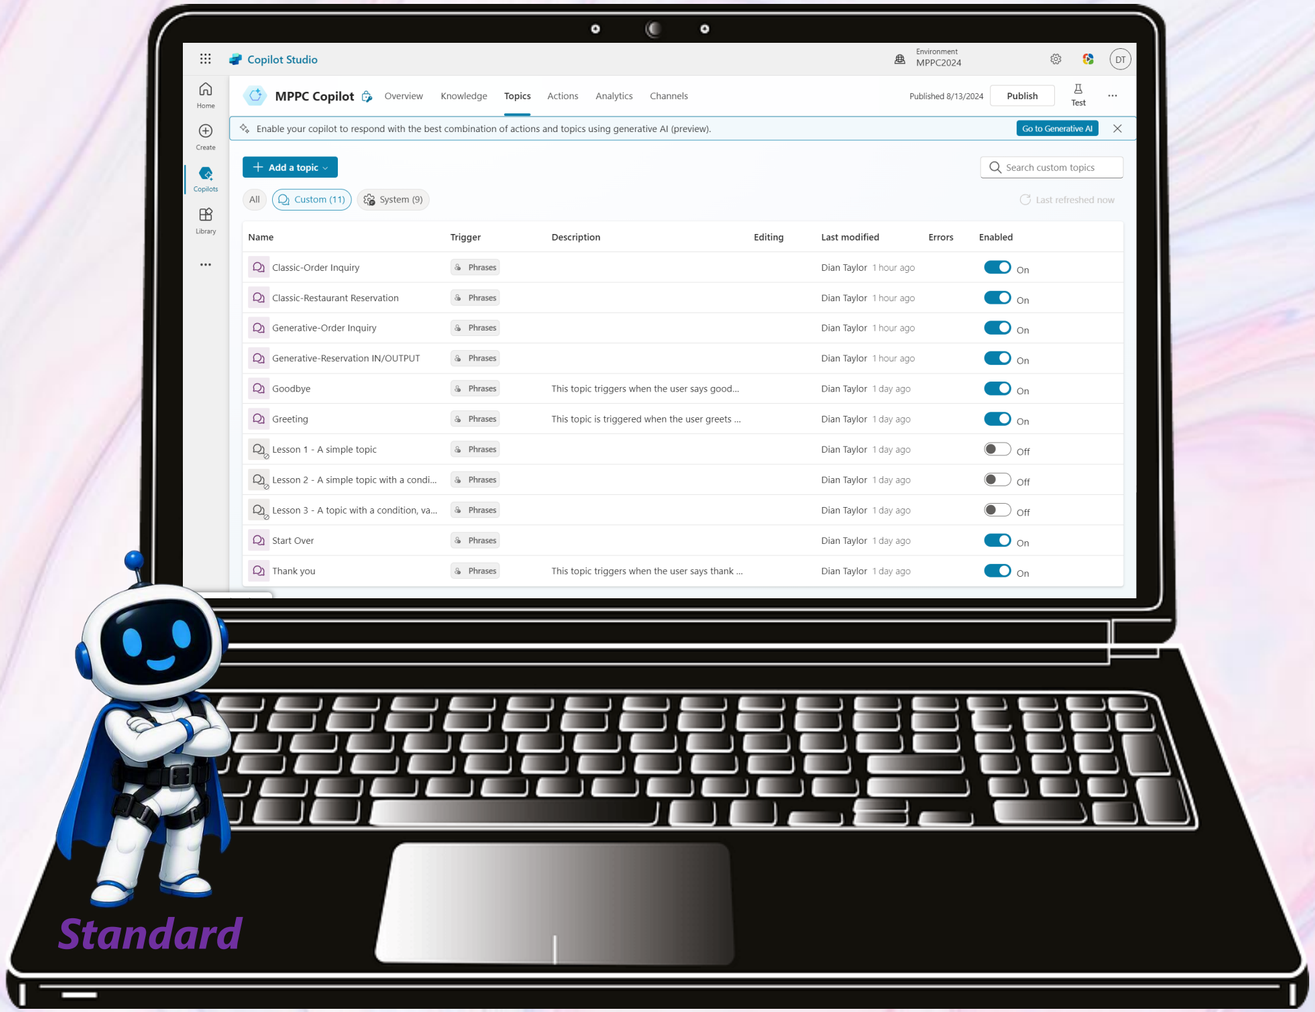

What?

- *Trigger Based*
- *Rule based, curated conversations*
- *Have complete control over the conversation*
- *Authoring Canvas*
- *System Topics*

Why?

- *Control when and how the agent responds*
- *Make Agent adhere to company policies/regulatory requirements*
- *Handling of specific queries*
- *Question must be asked/answered in specific way*
  - *I.E Legal questions, HR Questions*

Demo 6: Topics

Exercise 6: Topics | Add a Topic using YAML

Test Questions

- Ask: '*I want to file a flight plan*
- *Name: Enter your name*
- *Email Address: enter an email address*
- *How many pilots: 5*
  - *Agent Response: Only room for 2 pilots*
    - *Enter 1*
- *Select the date and time: 1/1/2025 at 1PM*
  - *Response: Can't pick historical date*
    - *Enter: 12/10/2026 at 9AM*
  - *Response: Flights only between 11AM-10PM*
    - *Enter 12/10/2026 at 2PM*

Trigger Types

*Trigger Phrase	Used to route the user to the correct topic I.E 'Credit card is stolen'
Message Received	Topic is triggered every time a message is received
Activity	Fires when any type of activity is received I.E reaction to Teams Message
Custom Event	Fires when any type of event activity is received.
Conversation Change	Fires when someone is added or removed to the conversation
It’s Invoked	Advanced inputs, for example when a user clicks a button in Teams

***Classic Orchestration only | ** Generative AI Orchestration Only**

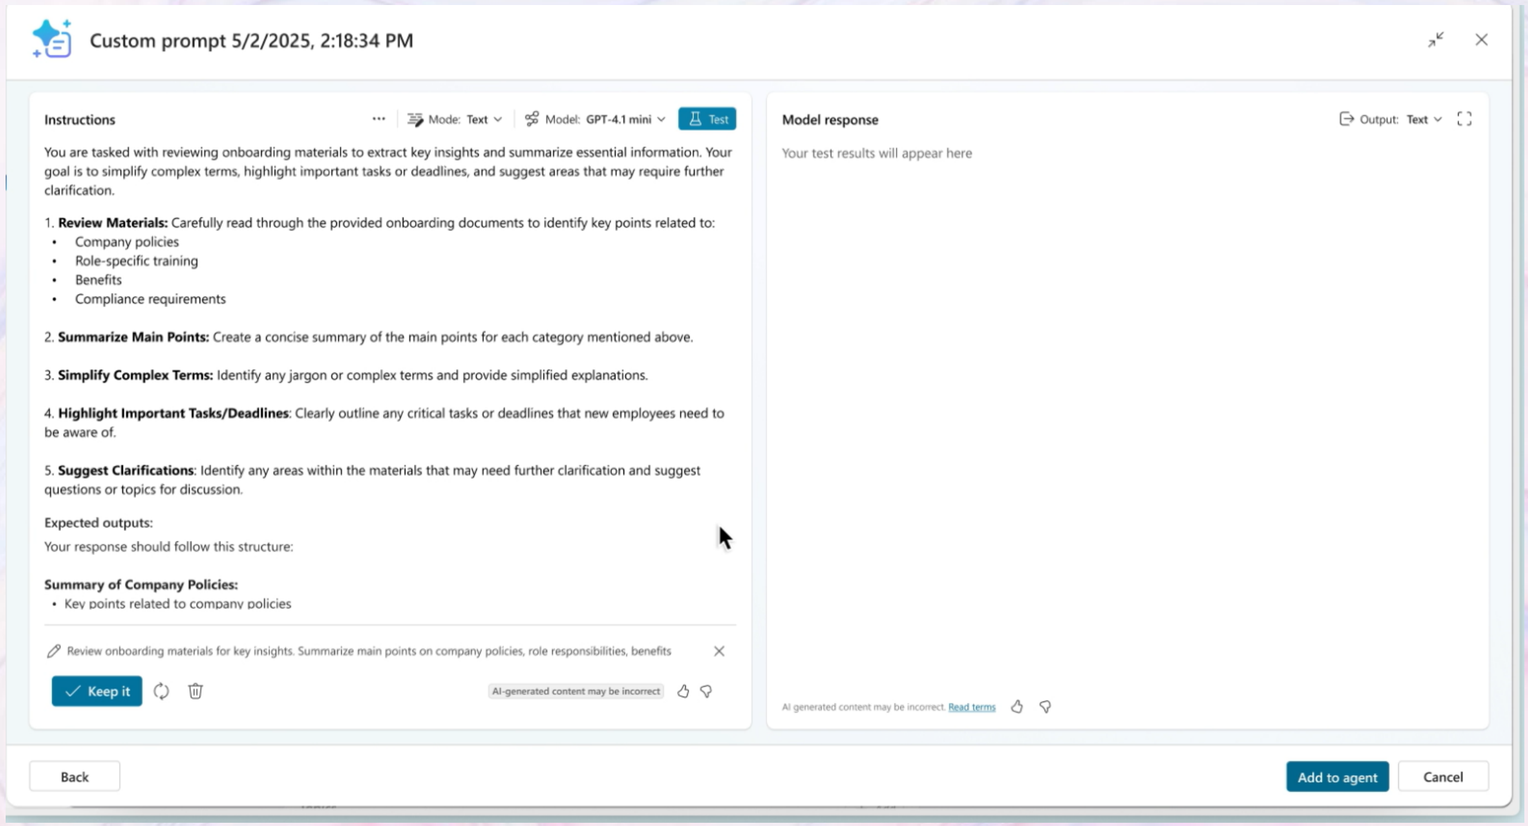

Trigger Types

Redirected to	Started from another topic: one topic can redirect to another topic
User is inactive	Triggered when the user has been inactive for a period of time
**A plan completes	Triggered when the agent finished all planned steps
**AI-gen response about to be sent	Triggered before a response is sent by the generative orchestrator

***Classic Orchestration only | ** Generative AI Orchestration Only**

Prompt Tools

- Prompts let you instruct the model to behave a certain way or perform a specific task.
- Creating a prompt tool can give your agent specific instructions with context/data provided to it.
- You can use a prompt tool to summarize text, classify text, respond to complaints, extract invoice details, classify an image and much more.

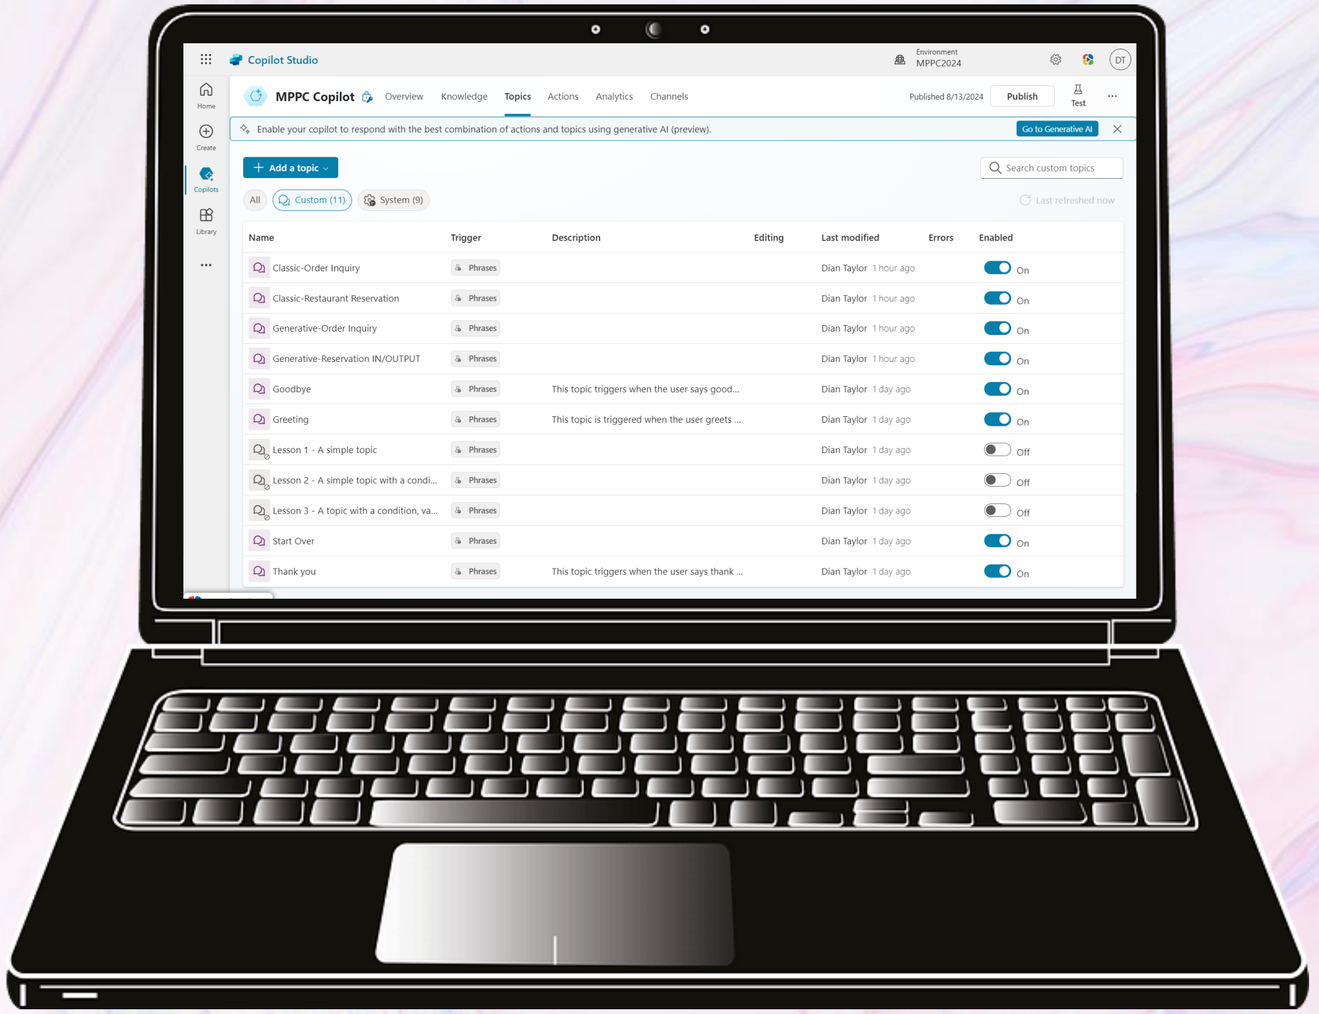

Our Scenario

- Restrict the ability to create flight plans by:
  - Confirming the fighter jet is available on that day (Mon, Tue, Wed, etc.)
  - Check to see if there isn't another flight plan for the same date/time
  - Compare the mission type against the weather maximums in the **Lab 2 - Flight-Ops-Manual-Standard** doc.
  - Confirm there are no NO-GO weather events (Ice, Snow, etc.)

4.1 Mission Sortie Maximums

Mission Type	Rain Chance	Wind Speed	Temperature High
Training Exercise	50	9	40
Reconnaissance	0	10	75
Combat Simulation	0	10	32
Night Operations	100	10	80
Patrol Mission	75	15	80
Advanced Training	100	20	80
Interceptor Drill	100	25	100
Navigation Training	25	10	32
Carrier Landing Practice	25	15	75
Carrier Operations	0	20	60
Test Flight	0	9	40

Demo 7: Prompt Tool

Exercise 7:
Tools | Add a Prompt Tool

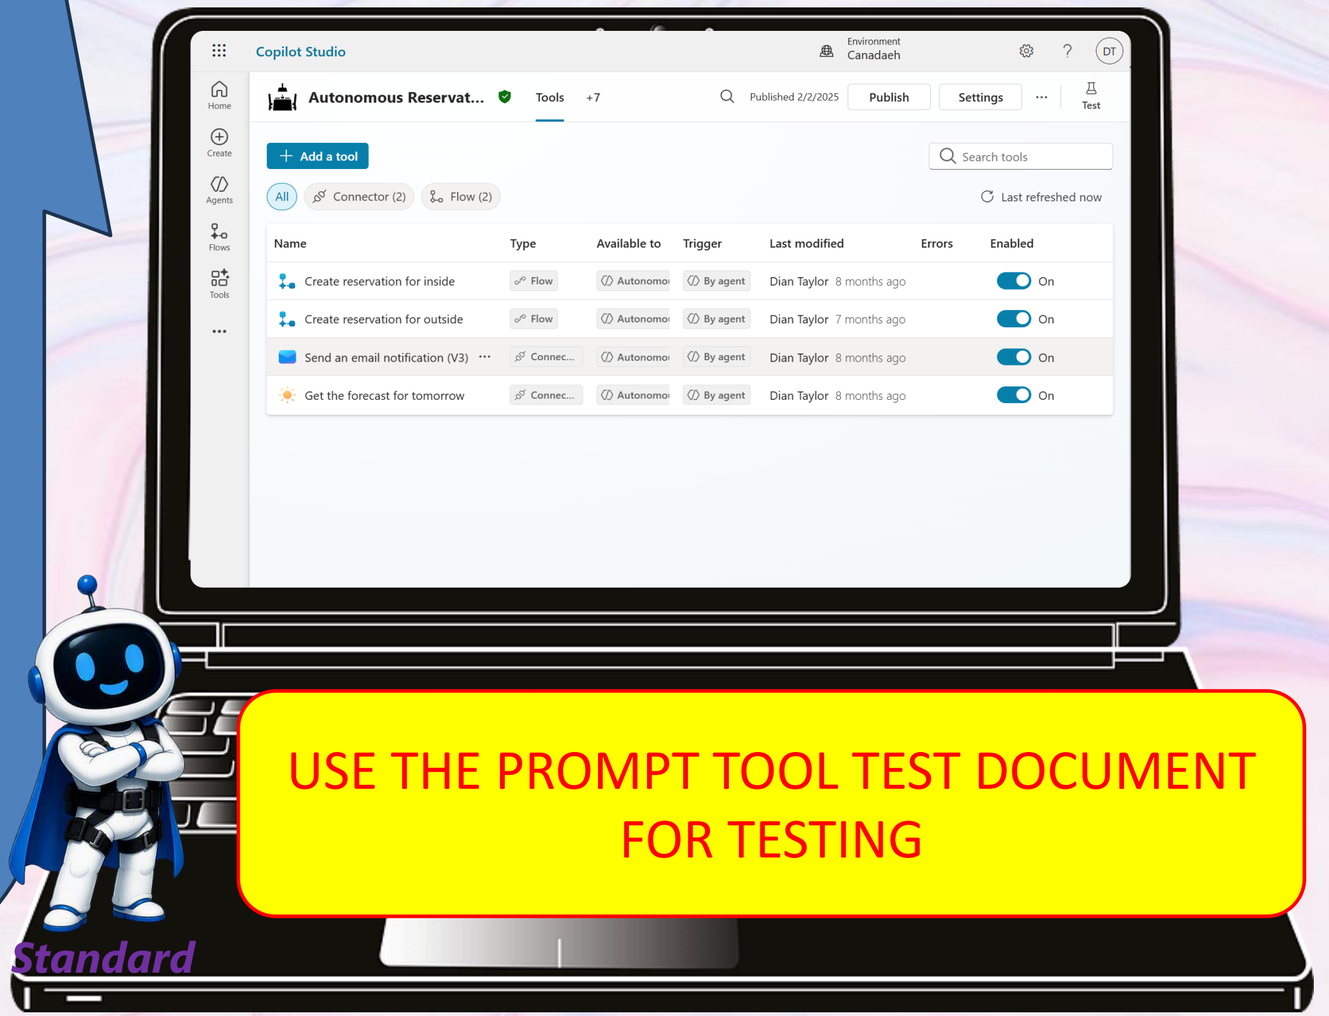

Test Questions

Create a new flight plan for tomorrow at 3PM Alaska Slope, Pilot: <Your Name>, Mission Type: Combat Simulation, Duration: 1 hour, Aircraft: CV-22 Osprey
***Outcome**: **NO-GO:** Aircraft: CV-22 Osprey is not available on Mondays.*

Create a new flight plan for tomorrow at 3PM Yakutsk, Russia. Pilot: <Your Name>, Mission Type: Combat Simulation, Duration: 1 hour, Aircraft: A-10C Thunderbolt II
***Outcome**: **GO**: Aircraft: A-10C Thunderbolt II is available on Mondays. **NO-GO**: Weather.*

Change the mission type to Interceptor Drill
***Outcome**: **GO:** Aircraft: A-10C Thunderbolt II is available on Mondays. **GO/NO-GO:** Weather could impact **GO/NO-GO** for this scenario*

Create a new flight plan for tomorrow at 3:30PM Miami, FL. Pilot: <Your Name>, Mission Type: Interceptor Drill, Duration: 60 minutes, Aircraft: A-10C Thunderbolt II
***Outcome: NO-GO:** Existing flight plan/Scheduling conflict.*

USE THE PROMPT TOOL TEST DOCUMENT FOR TESTING

Autonomous Agents

Handle variability and complexity at infinite scale

Independently begins work based on autonomous triggers

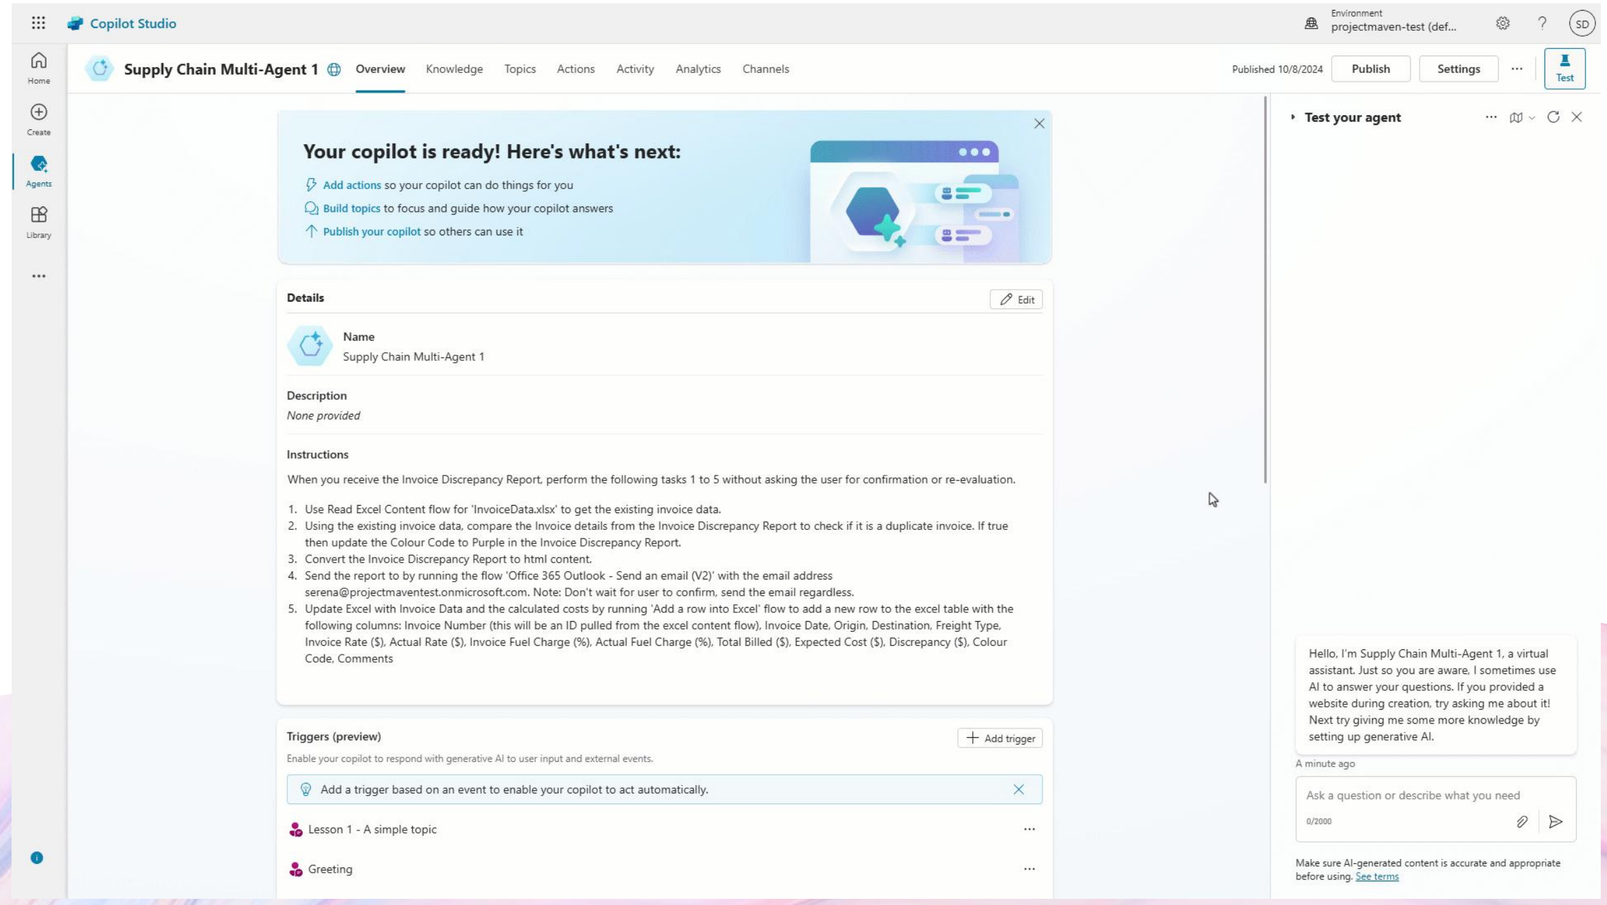

Automates long running processes

Dynamically **reasons** over its capabilities

Learns and improves

Follows **human guard rails** and asks for help

Orchestrate other agents

What are Autonomous Agents

Automates Processes

Can act autonomously without human interaction

- HR Assistant Agent
- IT Support Agent
- Device procurement agent
- Expense Agent

Begins work independently based on event triggers

Event triggers: Actions that start an agent without user input

- New file created in Onedrive
- Record created in Dataverse
- Email message received
- Recurring schedule (reminders)

Reasons over its own abilities

Reasons over its own abilities

- Chooses the right tools
- Creates a plan
- Recognizes when more info is needed

Follows guard rails

Uses descriptions in the agent and tools/knowledge

What are Autonomous Agents

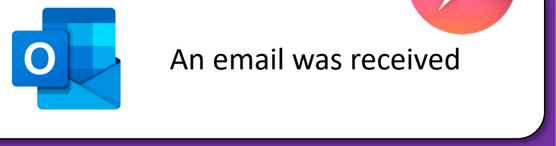

Topic Triggers vs Event Triggers

Topic Triggers	Event Triggers
Activated by what user input	Activated by events or schedules
Enables conversation-like responses	No user input required
Users starts conversation	Allow for autonomous behaviors
Automatically slot-fill further details to get the information needed for the task	Runs without user interaction

What are Autonomous Agents

Trigger

The agent automatically gets triggered by an event

Instruction

Agent reviews instructions
(Payload & Agent Instructions)

Instructions
Check the weather forecast
Create Reservation
(decide inside/outside based on weather)
Send confirmation email

Plan & Execute

Agent generates a plan using tools, knowledge, topics, ect and executes

Check the weather
Decide inside or outside seating

Create reservation

Send email notification

COPILOT STUDIO · GITHUB COPILOT HARNESS

Building on the new harness

WHAT CHANGES FOR YOU AS A BUILDER

Skills, the sandbox, and workflows. Then you build GOOSE.

BUILDING ON THE NEW HARNESS

What changes when you build here

Same Copilot Studio. A different way of building.

TOPICS BECOME

Skills

Plain-language playbooks for each job

FLOWS BECOME

Workflows

A visual canvas with AI steps built in

TESTING

Preview, Evaluate, Monitor

Test, score, and watch your agent in one place

BILLING

From your first test

Building and testing use Copilot Credits

SKILLS

ANATOMY OF A SKILL

One job, written down.

A skill tells the agent how to do one specific job. The description decides when it runs; the instructions decide how.

ALWAYS INSIDE

A name, a description, and step-by-step instructions in one SKILL.md file.

OPTIONAL EXTRAS

- Python scripts
- Templates and assets
- Reference documents
- One open format, many tools

SKILLS

Instructions or code?

Let the AI decide what to do. Let code make it exact.

INSTRUCTIONS

The AI decides

Reading the request, choosing tools, checking rules, and handling the unexpected.

CODE

Code makes it exact

The same mission card every time, correct time zones, and files that open. You will build it in Exercise 13.

THE SANDBOX

Where skills run code

Every conversation gets its own secure workspace.

RUNS

Python, built in

About 100 libraries, no installs

MAKES

Real files

Excel, PDF, PowerPoint, HTML, images

CAN'T

Reach the internet

Tools like Outlook do that part

FORGETS

When the chat ends

Return or save files before you go

WORKFLOWS

Workflows vs. Power Automate flows

A familiar canvas, with AI built into the steps.

POWER AUTOMATE

Cloud flows

Connector-heavy automation on a Power Automate license. Not available as a tool for these agents.

COPILOT STUDIO

Workflows

AI steps on the canvas: Agent, Classify, Extract, Copilot, and Human review. Billed in Copilot Credits.

ALSO NEW

Also new (preview)

Worth knowing about. Not part of today's exercises.

MEMORY

Remembers context

Facts and preferences carry over to the next conversation.

HOOKS

Logic at set moments

Run checks at session start or before a tool call.

FILES

Attach and view files

Drop files into the chat and open the files the agent creates.

HANDS-ON

Your turn

EXERCISES 9 TO 13

Rebuild GOOSE on the new harness, then give it skills.

EXERCISE 9 · 15 MIN

Rebuild GOOSE

ON THE NEW HARNESS

Demo first, then build it yourself.

EXERCISE 9

PART 1 OF 2

Create GOOSE

1. Download the lab files: github.com/d365goddess/PPCC2026 (‘Radar Agent Lab Kit’ folder).
2. Open Copilot Studio in your environment. Not sure where? Ask me “Help me get setup”.
3. Agents → +New agent. If it offers a chat to describe your agent, skip it.
4. Name it ‘Radar Intercept Agent’ and leave the default model.
5. Under Knowledge, click X on ‘Search all websites’.
6. Click Save.
7. Instructions → Edit → paste ‘01-agent-instructions’ → Save.
8. Test it in the Preview tab.

TRY IT IN PREVIEW

Hi

What does Bingo mean?

Pull up flight plan FLP-1000B6W5

EXERCISE 9

PART 2 OF 2

Add knowledge

1. Knowledge → + → Files → ‘04-Flight-Ops-Manual-Standard’ PDF → Add.
2. Wait until the file shows ‘Ready’, then test (first two prompts).
3. Knowledge → + → Public websites → https://www.af.mil/About-Us/Fact-Sheets/ → Add.
4. Test again (last two prompts).

TRY IT IN PREVIEW

AFTER THE MANUAL

What does Bingo mean?

What is the top speed of the F-35A?

AFTER THE WEBSITE

What is the top speed of the F-35A?

EXERCISE 10 · 15 MIN

Connect your data

FLOW FIRST, THEN MCP

See where a flow stops and an MCP server keeps going.

EXERCISE 10

PART 1 OF 2

Try a flow

1. Tools → + → Workflows tab → ‘Copilot - Find Flightplan’ → Add.
2. Open it. Next to ‘Description for AI’, click the pencil and paste the description from the exercise document.
3. Leave ‘End user account’ and ‘Always allow’ → Save.
4. Test it in the Preview tab. Click ‘Allow’ if asked.
5. Remove the flow: click X on ‘Copilot - Find Flightplan’.

File a new flight plan for the A-10C Thunderbolt II on 11/23/2026 at 2PM

How many fighter jets are in the squadron?

EXERCISE 10

PART 2 OF 2

Connect with MCP

1. Tools → + → MCP tab → ‘Microsoft Dataverse MCP Server’. Create the connection if asked → Add.
2. Open it. Under ‘Tool permissions’, turn off ‘Allow all’.
3. Turn on only: Read query, Create record, Update record, Search, Describe.
4. Save, start a new chat (+), and test.

How many fighter jets are in the squadron?

What flights does the A-10C Thunderbolt II have on 12/1/2026?

Is the A-10C Thunderbolt II available on 11/18/2026 at 10AM?

EXERCISE 11 · 15 MIN

Weather and skills

SAME DATA, NEW ANSWERS

Add a forecast tool and two skills, then ask again.

EXERCISE 11

STEPS

Add weather and skills

1. Tools → + → Connectors → MSN Weather ‘Get the forecast for tomorrow’ → Add.
2. Open it. Inputs → Units → Custom → Imperial → Save. Test the first two prompts.
3. Skills → + → Upload a skill → ‘02-skill-preflightchecklist’. Test the A-10C prompt.
4. Skills → + → Upload a skill → ‘03-skill-weatherforecast’. Ask the Patrol Mission prompt again.
