This document is to test your agent after you added the prompt tool. It will do the following checks before deciding if the flight plan can be created:

1. Check to see the aircraft is in service on the day you're requesting. This data is stored in 'service days' column in the 'Fighter Jet' table in the Flight plans app.
2. It then checks if there is already a flight plan for the same date/time in the 'Flight Plan' table.
3. If the above are good it will check the weather and compare the values for the mission type to the 'Flight-Ops-Manual-Standard' PDF document under Knowledge. On page 4 is a table with maximums (rain chance, wind speed, temperature high) for each mission type and some additional "NO-GO" conditions.
4. If the mission is a "GO" a new row will be created in the Flight Plan table. If the mission is a NO-GO the agent will let you know.

Scenario 1

Enter: "Create new flight plan for 10/26/2026 at 3PM Alaska Slope. Pilot: <your name>, Mission Type: Combat Simulation, Duration: 60 minutes, Aircraft: CV-22 Osprey"

Outcome:
NO-GO: Aircraft: CV-22 Osprey is not available on Mondays

Scenario 2

Enter: "Create a new flight plan for 10/26/2026 at 3PM Yakutsk, Russia. Pilot: <your name>, Mission Type: Combat Simulation, Duration: 60 minutes, Aircraft: A-10C Thunderbolt II"

Outcome:
GO: Aircraft: A-10C Thunderbolt II is available on Mondays
NO-GO: Weather

Scenario 3

Enter: "Change the mission type to Interceptor Drill"

Outcome:
GO: Aircraft: A-10C Thunderbolt II is available on Mondays
GO: Weather?

Scenario 4

Enter: "Create new flight plan for 10/26/2026 at 3:30PM Miami, FL. Pilot: <your name>, Mission Type: Advanced Training, Duration: 60 minutes, Aircraft: A-10C Thunderbolt II"

Outcome:
NO-GO: Existing flight plan/Scheduling conflict
